### QUESTION 1

An administrator performed a restore using a full system save that was taken from a system running IBM i 7.1 with GO SAVE option 21. The administrator was surprised to discover that no spooled files were restored.

Which action will allow the administrator to restore spooled files at the next restore operation?

- A. Set the QSAVSPPOOL system value to \*YES before the full system save.
- B. Set the SPLEDTA parameter to \*All for all the output queues using the command CHGOUTQ, before the full system save.
- C. On the SAVE menu, before the full system save, select Option 20- Define save system and user data defaults and set "Spooled file data" to \*All.
- D. On the RESTORE menu, before the full system restore, select Option 20- Define restore system and user data defaults and set "Spooled file data" to \*All.

Correct Answer: C

---

### QUESTION 2

During a migration the system is mistakenly IPLed. The data migration is successfully resumed and completed.

When the administrator runs the RSTAUT command, no authorities are restored. What is the most likely cause of the problem?

- A. The RCLSTG command was not run before the data restore was resumed.
- B. The storage management directory was overlaid as a result of the IPL.
- C. The INZSYS command was not successfully run before restoring authorities.
- D. The private authority table loaded by the RSTUSRPRF command was automatically deleted by the system IPL.

Correct Answer: D

---

### QUESTION 3

An administrator is working with users to enable them to control printers in their various departments. The required security must enable only control of the departmental printers to users in that department, as well as restricting others from using them.

What should the administrator do for each department to support these requirements?

- A. Change the output queue "authority to check" parameter to \*DTAAUT. Change the \*PUBLIC authority for the output queues and devices to \*EXCLUDE. Grant each user \*CHANGE authority to each device description and output queue.

B. Create a group profile to own the output queue and device decryption. Change the ownership of the output queue and device description to the new profile. Make the users members of the group profile. Grant the group profile \*SPLCTL special authority.

C. Create a group profile to own the output queue and device decryption. Change the ownership of the output queue and device description to the new profile. Make the users members of the group profile. Grant the group profile \*JOBCTL special authority.

D. Create an authorization list for the departments printers. Assign the output queues and device descriptions to the authorization list. Change the output queue "authority to check" parameter to \*DTAAUT. Change the \*PUBLIC authority to \*EXCLUDE. Add each user to the authorization list with \*CHANGE authority.

Correct Answer: D

---

#### QUESTION 4

An administrator needs to have a selected group of users run their batch jobs at priority 40, instead of the default of 50, in the QBATCH subsystem. In what work management object can the default run priority be specified for a group of jobs?

- A. Class
- B. Pouting Entry
- C. Job Description
- D. Subsystem Description

Correct Answer: A

---

#### QUESTION 5

An IBM i 7.1 partition has a system ASP that has a combination of Solid State Drive (SSD) units and Hard Disk Drive (HDD) units. The system administrator needs to permanently migrate the logical files that are randomly accessed by the application jobs to the SSDs.

What is the appropriate method for identifying the most randomly accessed logical and physical files?

- A. Query the table QSYS2/SYSIXSTAT for files with logical reads greater than U and sequence in descending order.
- B. Use WRKACTJOB command to identify the application jobs. For each job, select option 5=Work with, then 14. Display open files, if active, then press F1.
- C. From Performance Tools, generate a system report to an output file. Query the output file for logical files with random reads greater than U and sort in descending order.
- D. Trace the accessed file data using the TRCASPBAL SET(\*ON) ASP(I) command. Print the report with the command PRTTRCRPTTYPE (\*FILE) QORDER(\*DESC), and look for Random Reads/sec.

Correct Answer: A
