**QUESTION 1**

When using the installation wizard to install the WebSphere Application Server v6 Network Deployment package, product binaries are copied to the installation directory. Which of the following will also occur as a result of the installation?

- A. A profile for deployment manager will be created by default.
- B. A profile for application server will be created by default
- C. A custom profile will be created by default
- D. A system administrator has an option to create a profile using the create profile wizard

Correct Answer: D

QUESTION 2

Two enterprise applications need to be installed into the WebSphere Application Server environment. Each application has to rely upon authentication through WebSphere security, but must map to different user registers. Which of the following statements is valid?

- A. Both applications can be installed into the same application server and each need to be mapped to separate user registries.
- B. Both applications can be installed into the same node but different application servers.
- C. The applications need to be installed on separate nodes which can be in the same cell.
- D. The applications need to be installed in separate cells.

Correct Answer: D

QUESTION 3

Which of the following components are supported by Express/Base WebSphere Application Server V6 through the WebSphere administrative console?

- A. Application server clustering
- B. External web server
- C. External generic server
- D. WebServer V5 JMS server

Correct Answer: B

**QUESTION 4**

While packaging an enterprise application, a system administrator notices that the JNDI names of some of the EJBs conflict with existing names in the JNDI namespace. What action should the system administrator take to correct this problem?

- A. Ask the developers to prefix the JNDI names of the EJB references with the name of the application to avoid clashes.
- B. Use the WebSphere administrative console to change the names of the EJB references
- C. Use the Application Server Toolkit (AST) to map the EJB references to unique names in the name space.
- D. Use the WebSphere administrative console to create a separate name space for the application

Correct Answer: C

QUESTION 5

When the HTTP plug-in configuration file is regenerated either manually or automatically the file must be propagated to the Web servers. If a system administrator needs to configure automatic propagation of the plugin-cfg.xml file for an Apache HTTP server, which of the following tasks must be performed?

- A. Enable session management for the HTTP server
- B. Configure the HTTP server on a managed node.
- C. Automatic propagation is not supported, the plugin-cfg.xml file must be transferred manually
- D. Set the automatic propagation flag in the plugin-cfg.xml file.

Correct Answer: B
