**QUESTION 1**

A state transition is not supposed to be available as a clickable action in a form at runtime but it appears anyway. Why?

- A. The state transition is not configured to be excluded in the Sub Action properties.
- B. The Hidden Action property is not configured correctly in the State Transition properties.
- C. The Default Display property is not configured to be excluded in the Sub Action properties.
- D. The Secondary Action property is not configured correctly in the State Transition properties.

Correct Answer: A

QUESTION 2

A new classification has been defined and the developer is ready to create the new classification's local root. From the Hierarchy pane the focus is placed on the Classification root node and the option New is selected. The new classification does not show up as an option in the Hierarchy pane drop-down as a valid child that can be added to the root.

What could be wrong?

- A. The new classification's form has not been added to the Includes/Forms tab of the new classification's form.
- B. The new classification's form has not been added to the Includes/Forms tab of the root classification form.
- C. The new classification's form has not been added to the Includes/Forms tab of the classification business object (BO).
- D. The new classification's form has not been added to the Includes/Forms tab of the new classifications BO.

Correct Answer: B

QUESTION 3

Several organization records appear in reports but do not appear in the Organization hierarchy. What should be the first item to validate during the troubleshooting process for the records in question?

- A. verify that the records have the required Primary Organization association to the organization's root node in the hierarchy
- B. verify that the records have forward and reverse association strings of Included In and Includes to other records in the hierarchy
- C. verify that the records have forward and reverse association strings of Is Parent Of and Is Child Of to other records in the hierarchy
- D. verify that the records have forward and reverse association strings of Primary Location and Primary Location Of to other records in the hierarchy

Correct Answer: C

QUESTION 4
