**QUESTION 1**

What is configured in an Acceleration policy? (Choose the best answer)

- A. Redundant Steelhead Mobile Controllers
- B. In-path rules
- C. Group IDs
- D. Port labels

Correct Answer: B

---

**QUESTION 2**

If data store synchronization is to be successful, which of these must be true?

- A. There must be a resilient path between the SteelHeads to prevent a split brain situation.
- B. The in-path IP addresses must be reachable from each other and connected physically in-path.
- C. The SteelHeads must be the same model and run the same RiOS version.
- D. The master must be the same or larger data store than the backup.
- E. The SteelHeads must be in a serial cluster arrangement.

Correct Answer: B

---

**QUESTION 3**

You are troubleshooting a TCP connection that is not being optimized. On the Current Connections report, you expand the connection and see the pass-through reason is ``Pre-existing connection\``.

Without restarting the optimization service, how could you get this connection to optimize?

- A. Reset the connection in the Current Connections report.
- B. Create a full-transparency in-path rule for the source and destination hosts.
- C. Create a fixed-target in-path rule for the source and destination hosts.
- D. Enable auto-kick-off on the default in-path rule.
- E. Enable Simplified Routing in ``all\`` mode.

Correct Answer: A

---

**QUESTION 4**

What is "Peer Affinity" on an Interceptor appliance?

- A. Which parallel Interceptor appliance an Interceptor appliance is most likely to forward traffic to
- B. Deciding which of the two serial Interceptors handles more traffic
- C. Matching remote Steelhead appliances to a local Steelhead appliance
- D. The shipyard from which Riverbed is most likely to ship Interceptor appliances

Correct Answer: C

**QUESTION 5**

A SteelHead is deployed in a VLAN bridge. Which VLAN ID should be configured on the in-path interface to support this environment?

- A. 1
- B. 100
- C. 200
- D. No configuration is necessary as LAN and WAN interfaces are on access ports
- E. It will require an in-path interface for each VLAN

Correct Answer: C
