QUESTION 1

Scenario: A user reports that a financial application is performing poorly. A Citrix Administrator has accessed the server OS machine load evaluator index report from Citrix Director. The administrator reviews the data for the last three months and notices that on the last three days of the month the CPU utilization is trending at 97% while memory utilization is 48%.

Based on this information, which two measures could the administrator take to improve performance of the finance application? (Choose two.)

A. Add a vCPU to the virtual servers.

B. Provision additional virtual servers.

C. Add additional RAM to the virtual servers.

D. Move the virtual servers to a higher-performance storage subsystem.

Correct Answer: AB

QUESTION 2

Scenario: A Citrix Administrator is modifying a vDisk. The administrator finishes making changes to the vDisk and promotes it to production. Now, only one machine is working with the new vDisk. In which access mode should the administrator put the vDisk so that multiple target devices can boot from this vDisk?

A. Test

B. Private

C. Standard

D. Production

E. Maintenance

Correct Answer: C

QUESTION 3

A Citrix Administrator creates an external network in a XenServer deployment; however, virtual machines connected to the newly created external network CANNOT communicate with other devices on the same subnet as the XenServer host. The virtual machines are unable to communicate with devices on the same subnet as the XenServer host because _____ or _____. (Choose the two correct options to complete the sentence.)

A. the virtual machines are behind a NAT router

B. MAC filtering is enabled on the external network

C. the link status for the external NIC is disconnected

D. the virtual machines are on a VLAN that is configured incorrectly

Correct Answer: CD

QUESTION 4

Scenario: Users who connect through the NetScaler are receiving the following error after they log on with their username and password:

Http/1.1 Internal Server Error 29

A Citrix Administrator checks the status of the NetScaler and does NOT find any alerts on the System Log.

Which server could be causing this error?

A. Database

B. StoreFront

C. Citrix Licensing

D. Domain Controller

Correct Answer: B

QUESTION 5

Which two methods could a Citrix Administrator use to ensure that users are able to launch multiple virtual desktop sessions? (Choose two.)

A. Change the \\'Desktops per user\\' setting in the delivery groups settings.

B. Give the user multiple devices so that they can have a session open on each.

C. Create two host connections from the Delivery Controller to different hypervisors.

D. Create two delivery groups from the same catalog and assign the users to both delivery groups.

Correct Answer: AD
