### QUESTION 1

Scenario: An administrator manages four XenServer hosts in a resource pool. To increase capacity, the administrator purchased one new host, which is a different CPU model, but from the same manufacturer. The administrator CANNOT add the new server to the existing pool.

What does the administrator need to use to force the host to join the existing pool?

- A. Command line
- B. Maintenance Mode
- C. Add to Pool Wizard
- D. Add Server Wizard

Correct Answer: A

---

### QUESTION 2

An administrator needs to back up the metadata of a XenServer pool on a scheduled basis to replicate to the Disaster Recovery site.

Which two steps must the administrator take to backup the pool? (Choose two.)

- A. Open XenCenter.
- B. Open the XenServer console.
- C. Configure scheduled snapshots.
- D. Select Backup, Restore and Update.
- E. Select Resource Pool Configuration.

Correct Answer: BD

---

### QUESTION 3

Scenario: A XenServer host has a Fibre Channel adapter which is connected to the corporate SAN. The SAN Administrator created a new LUN and presented it to the XenServer host.

Which storage repository type does the administrator need to use to be able to create virtual machines on the LUN?

- A. Local LVM
- B. EXT3 VHD
- C. Hardware HBA
- D. Software iSCSI

Correct Answer: C

---

#### QUESTION 4

Scenario: An administrator needs to increase the maximum memory range from 1 GB to 2 GB on a virtual machine configured with dynamic memory control. The virtual machine runs Windows Server 2008, has XenServer tools installed, and it is currently in a running state.

What should the administrator consider prior to adjusting the memory configuration of the virtual machine?

- A. The XenServer host needs to have enough available memory.
- B. XenServer workload balancing needs to be enabled on the host.
- C. The virtual machine needs to be moved to another resource pool.
- D. The virtual machine needs to be restarted in order for the changes to take effect.

Correct Answer: D

---

#### QUESTION 5

Scenario: An administrator is installing Provisioning services which uses PXE for starting virtual machines. DHCP is installed and configured in the environment.

What additional component is required for the PXE environment to start a virtual machine?

- A. TFTP
- B. BootP
- C. SOAP Service
- D. Boot Device Manager

Correct Answer: A
