QUESTION 1

Scenario: An administrator is creating a vDisk image of a physical Windows server using XenConvert. This vDisk is going to be used by multiple target devices in Standard Image mode.

What does the administrator need to do during the physical-to-virtual conversion to increase the vDisk performance?

A. SysPrep the vDisk.

B. Optimize the vDisk.

C. Run the Windows server in Safe mode.

D. Defragment the physical hard disk before conversion.

Correct Answer: B

QUESTION 2

An administrator needs to create a network Access Control List for a group of hosts in XenServer. Which Access Control List should the administrator choose?

A. VM

B. VIF

C. Global

D. Resource Pool

Correct Answer: D

QUESTION 3

Scenario: An administrator needs to configure a shared storage repository for a XenServer pool. The storage team has provisioned 500 GB of storage space on a NetApp SAN to be used for the XenServer storage repository. Thin provisioning and data deduplication were defined as requirements for the storage repository and must be enabled using XenCenter.

Which type of storage repository will allow the administrator to meet the specified requirements?

A. NFS VHD

B. Hardware HBA

C. Software iSCSI

D. Advanced StorageLink

Correct Answer: D

QUESTION 4

Scenario: An administrator needs to install Windows Server 2008 R2 on a new virtual machine. The Windows Server 2008 R2 ISO file is located on a Windows share.

Which storage repository does the administrator need to create to be able to mount the ISO file to the new virtual machine?

A. iSCSI

B. CIFS

C. NFS ISO

D. StorageLink

Correct Answer: B

QUESTION 5

Scenario: Users are NOT able to log into XenCenter using their Active Directory credentials. The administrator checked to ensure that the XenServer host exists as a valid computer object in Active Directory.

What should the administrator do to ensure that users are able to authenticate successfully using XenCenter?

A. Recreate the XenServer host computer object in Active Directory.

B. Ensure that the XenServer host and domain controller are in the same time zone.

C. Check that the time is synchronized between Active Directory and the XenServer host.

D. Set up the correct delegation on the XenServer host computer object in Active Directory.

Correct Answer: C
