QUESTION 1

What can the administrator create to configure a high availability plan for a group of mission critical virtual machines in a single pool?

A. Site

B. vApp

C. Folder

D. Secondary Site

Correct Answer: B

QUESTION 2

Scenario: Users are NOT able to log into XenCenter using their Active Directory credentials. The administrator checked to ensure that the XenServer host exists as a valid computer object in Active Directory.

What should the administrator do to ensure that users are able to authenticate successfully using XenCenter?

A. Recreate the XenServer host computer object in Active Directory.

B. Ensure that the XenServer host and domain controller are in the same time zone.

C. Check that the time is synchronized between Active Directory and the XenServer host.

D. Set up the correct delegation on the XenServer host computer object in Active Directory.

Correct Answer: C

QUESTION 3

Scenario: An administrator tries to start a virtual machine on a host that has an NFS storage repository. The virtual machine gives the error "This virtual machine needs storage that cannot be seen from the server."

Which action, within XenCenter, can the administrator take on the NFS storage repository to correct this issue?

A. Repair

B. Forget

C. Detach

D. Set as default

Correct Answer: A

QUESTION 4

Scenario: The SAN Administrator provided an NFS share for the XenServer Administrator to use. The share name is NfsLun01 and is located at 192.168.0.53.

Which format must the administrator use to connect to the share?

A. 192.168.0.53:/NfsLun01

B. \192.168.0.53\NfsLun01

C. 192.168.0.53:3260\NfsLun01

D. http://192.168.0.53/NfsLun01

Correct Answer: A

QUESTION 5

Scenario: A XenServer pool consists of two XenServer hosts that each have four network interface cards (NICs). The first two NICs form a bond that is used for management and virtual machine network traffic. The other two NICs are unused. The administrator notices that the system is using all available network bandwidth and iSCSI disk performance is being affected.

Which network type could the administrator create to move the storage traffic to one of the unused NICs?

A. Bonded

B. Management

C. Cross-server private

D. Single-server private

Correct Answer: B
