QUESTION 1

Scenario: An administrator is working with a production resource pool and a test resource pool. The administrator needs to move three virtual machines from the test resource pool into the production resource pool.

Which action must the administrator take to meet the requirements of the scenario?

- A. Drag the three virtual machines from the test resource pool to the production resource pool.
- B. Convert the three virtual machines to templates and deploy the templates into the production resource pool.
- C. Copy the three virtual machines and import the copies of the virtual machines into the production resource pool.
- D. Export the three virtual machines as backups and import the virtual machines into the production resource pool.

Correct Answer: D

QUESTION 2

An administrator needs to create a template from an existing virtual machine that is installed with Windows Server 2008.

The administrator needs to the virtual machine before converting it into a template. (Choose the correct option to complete the sentence.)

- A. copy
- B. export
- C. sysprep
- D. snapshot

Correct Answer: C

QUESTION 3

Scenario: An administrator of a XenServer pool needs to ensure that virtual machines will be available in the event of a disaster. A backup XenServer implementation is in place in another location; however, there is NO replication available.

In preparation for disaster recovery, which step should the administrator perform?

- A. Run the vm-export command.
- B. Run the vm-migrate command.
- C. Take a snapshot of the virtual machines.
- D. Install backup agents on the virtual machines.

Correct Answer: A

QUESTION 4

Scenario: An administrator needs to ensure that the XenServer pool database in a two- server pool is highly available. However, one of the XenServer hosts has failed and is NOT recoverable. The administrator now must re-establish high availability using a new host. The existing host has taken the master role.

Which step should the administrator take to recover the backup pool information to the new XenServer host and ensure that it is highly available with the existing XenServer master?

- A. Add the new host to the existing pool.
- B. Restore the pool metadata to the new host.
- C. Restore the pool metadata to the running host.
- D. Create a new pool and restore the metadata to the new host.

Correct Answer: A

QUESTION 5

Scenario: An administrator is creating a vDisk image of a physical Windows server using XenConvert. This vDisk is going to be used by multiple target devices in Standard Image mode.

Which two steps does the administrator need to take to prepare the Windows server for physical- to-virtual conversion? (Choose two.)

- A. Disable Windows Autoplay.
- B. Enable Windows Automount.
- C. Put the server in Standby mode.
- D. Format the hard disk drive of the server.

Correct Answer: AB
