QUESTION 1

What information does the report schema command not provide? (Choose all that apply.)

- A. Size of the datafiles
- B. Size of the tempfiles
- C. Date of last backup for datafiles and tempfiles
- D. Filenames for each datafile
- E. Checkpoint SCN associated with the last RMAN backup

Correct Answer: CE

QUESTION 2

Which two statements are true regarding the SQL Repair Advisor? (Choose two.)

- A. The SQL Repair Advisor can be invoked to tune the performance of the regressed SQL statements.
- B. The SQL Repair Advisor can be invoked even when the incident is not active for a SQL statement crash.
- C. The SQL Repair Advisor is invoked by the Health Monitor when it encounters the problematic SQL statement.
- D. The DBA can invoke the SQL Repair Advisor when he or she receives an alert generated when a SQL statement crashes and an incident is created in the ADR.

Correct Answer: BD

You can run SQL Repair Advisor through the EM Support Workbench when an incident raised. Or You run the SQL Repair Advisor by creating and executing a diagnostic task using the DBMS_SQLDIAG.CREATE_DIAGNOSIS_TASK and DBMS_SQLDIAG.REPAIR_TASK respectively. The SQL Repair Advisor first reproduces the critical error and then tries to produce a workaround in the form of SQL patch.

QUESTION 3

Which of the following are not disabled by default?

- A. Jobs
- B. Chains
- C. Windows
- D. Window groups
- E. Schedule

Correct Answer: E

QUESTION 4

What is an obsolete backup set?

- A. A backup set that is missing one or more backup set pieces
- B. A backup that has exceeded the retention criteria and is no longer needed
- C. A backup set that does not include archived redo logs
- D. A backup set that can not be recovered due to corruption
- E. A backup set superceded by a datafile copy

Correct Answer: B

QUESTION 5

Users are connected to a database instance that is using Automatic Storage Management (ASM). The DBA executes the command as follows to shut down the ASM instance:

```
SQL> SHUTDOWN IMMEDIATE;
```

What happens to the database instance?

- A. It shuts down long with the ASM instance.
- B. It is aborted and the ASM instance shuts down normally.
- C. It stays open and SHUTDOWN command for the ASM instance fails.
- D. It shuts down only after all pending transactions are completed and the ASM instance waits for this before shutting down.

Correct Answer: C

IMMEDIATE or TRANSACTIONAL Clause ([link](#))

Oracle ASM waits for any in-progress SQL to complete before performing an orderly dismount of all of the disk groups and shutting down the Oracle ASM instance. Oracle ASM does not wait for users currently connected to the instance to

disconnect. If any database instances are connected to the Oracle ASM instance, then the SHUTDOWN command returns an error and leaves the Oracle ASM instance running.

Because the Oracle ASM instance does not contain any transactions, the TRANSACTIONAL mode behaves the same as IMMEDIATE mode.
