QUESTION 1

Examine the command to perform a data pump export operation on a source database:

$> expdp hr/hr DIRECTORY=dumpdir DUMPFILE=emp1.dmp VIEWS_AS_TABLE=emp_dept

On the target database, you execute the data pump import command:

$> impdp hr/hr DIRECTORY=dumpdir DUMPFILE=emp1.dmp VIEWS_AS_TABLE=emp_dept

Which three statements are true? (Choose three.)

A. The expdp operation exports data that satisfies the condition of the defining query used to create the EMP_DEPT view.

B. The impdp operation creates the view and dependent objects.

C. All rows from the dependent objects, along with the metadata required to create the EMP_DEPT view, are exported.

D. Objects dependent on the EMP_DEPT view are exported.

E. The impdp operation creates EMP_DEPT as table and populates it with the data from the export dump file.

Correct Answer: ADE

QUESTION 2

You plan to implement the distributed database system in your company. You invoke Database

Configuration Assistant (DBCA) to create a database on the server. During the installation, DBCA prompts

you to specify the Global Database Name.

What must this name be made up of?

A. It must be made up of a database name and a domain name.

B. It must be made up of the value in ORACLE_SID and HOSTNAME.

C. It must be made up of the value that you plan to assign for INSTANCE_NAME and HOSTNAME.

D. It must be made up of the value that you plan to assign for ORACLE_SID and SERVICE_NAMES.

Correct Answer: A

Using the DBCA to Create a Database (continued)

3.

Database Identification: Enter the Global Database Name in The form database_name.domain_name, and the system identifier (SID). The SID defaults lo the database name and uniquely identifies the instance associated with the database.

4.

Management Options: Use this page to set up your database so that it can be managed with Oracle Enterprise Manager. Select the default: "Configure the Database with Enterprise Manager." Optionally, this page allows you to configure alert notifications and daily disk backup area settings.

Note: Yon must configure the listener before you can configure Enterprise Manager (as shown earlier).

QUESTION 3

Automatic Shared Memory Management (ASMM) is enabled for your database instance. You execute the

following command:

SQL> ALTER SYSTEM SET DB_CACHE_SIZE = 100M;

Which statement is true?

A. It succeeds and the minimum size for the DEFAULT buffer pool is set to 100M.

B. It fails because DB_CACHE_SIZE is a static initialization parameter.

C. It fails because ASMM is enabled and individual SGA components cannot be sized.

D. It succeeds and the value is changed in the SPFILE immediately, but the change takes effect only at the next instance startup.

Correct Answer: A

QUESTION 4

You execute the commands:

```
SQL>CREATE USER sidney
    IDENTIFIED BY out_standing1
    DEFAULT TABLESPACE users
    QUOTA 10M ON users
    TEMPORARY TABLESPACE temp
    ACCOUNT UNLOCK;

SQL> GRANT CREATE SESSION TO sidney;
```

Which two statements are true? (Choose two.)

A. The create user command fails if any role with the name SIDNEY exists in the database.

B. The user Sidney can connect to the database instance but cannot perform sort operations because no space quota is specified for the temp tablespace.

C. The user Sidney is created but cannot connect to the database instance because no profile is assigned to the user.

D. The user Sidney can connect to the database instance but requires relevant privileges to create objects in the users tablespace.

E. The user Sidney is created and authenticated by the operating system.

Correct Answer: AD

QUESTION 5

Your database is configured in ARCHIVELOG mode.

Examine the RMAN configuration parameters:

```
CONFIGURE RETENTION POLICY TO REDUNDANCY 1; # default
CONFIGURE BACKUP OPTIMIZATION OFF; # default
CONFIGURE CONTROLFILE AUTOBACKUP OFF; # default
CONFIGURE DEVICE TYPE DISK PARALLELISM 1 BACKUP TYPE TO BACKUPSET;
CONFIGURE ARCHIVELOG BACKUP COPIES FOR DEVICE TYPE DISK TO 1; # default
```

Examine the command:

RMAN> BACKUP DATABASE PLUS ARCHIVELOG DELETE INPUT;

What is the outcome?

A. It fails because the DELETE INPUT option can be used only with the BACKUP AS BACKUPSET command.

B. It executes successfully and creates a backup set of the database along with archived log files and then deletes the original archived log files.

C. It executes successfully and creates an image copy of the database along with archive log files and then deletes the original archived log files.

D. It fails because the DELETE INPUT option can be used only with the BACKUP AS COPY command.

Correct Answer: B
