QUESTION 1

What are two benefits of installing Grid Infrastructure software for a stand-alone server before installing and creating an Oracle database?

- A. Effectively implements role separation
- B. Enables you to take advantage of Oracle Managed Files.
- C. Automatically registers the database with Oracle Restart.
- D. Helps you to easily upgrade the database from a prior release.
- E. Enables the Installation of Grid Infrastructure files on block or raw devices.

Correct Answer: AC

C: To use Oracle ASM or Oracle Restart, you must first install Oracle Grid Infrastructure for a standalone server before you install and create the database. Otherwise, you must manually register the database with Oracle Restart.

Desupport of Block and Raw Devices With the release of Oracle Database 11g release 2 (11.2) and Oracle RAC 11g release 2 (11.2), using Database Configuration Assistant or the installer to store Oracle Clusterware or Oracle Database files directly on block or raw devices is not supported. If you intend to upgrade an existing Oracle RAC database, or an Oracle RAC database with Oracle ASM instances, then you can use an existing raw or block device partition, and perform a rolling upgrade of your existing installation.

Performing a new installation using block or raw devices is not allowed.

QUESTION 2

Which two are true for databases running in ARCHIVELOG mode? (Choose two.)

- A. Archived redo log files can only be multiplexed to a maximum of ten local destinations.
- B. Inactive redo log groups must be archived before they can be reused.
- C. Archived redo log files can only be backed up when backing up the database.
- D. Archived redo log files get overwritten if the archived redo file destination is full.
- E. Archived redo log files can be multiplexed to a maximum of thirty destinations.

Correct Answer: AB

QUESTION 3

Your single-instance Oracle 12c database home currently supports conventional auditing and uses Automatic Storage Management (ASM). You want to enable unified auditing by executing the command:

\$ make -fins_rdbms.mk uniaud_on ioracle ORACLE_HOME=\$ORACLE_HOME

Which two steps should you perform before executing this command? (Choose two.)

- A. Ensure that the initialization parameter AUDIT_TRAIL is set to DB.
- B. Drop any existing fine-grained audit (FGA) policies.
- C. Stop the listener.
- D. Shut down the database instance.
- E. Disable auditing by setting the initialization parameter AUDIT_TRAIL to NONE.

Correct Answer: CE

QUESTION 4

Which four statements are true about database instance behavior? (Choose four.)

- A. An idle instance is created when a STARTUP NOMOUNT is successful
- B. All dynamic performance views (v\$ views) return data when queried from a session connected to an instance in NOMOUNT state
- C. The consistency of redo logs and data files is checked when mounting the database
- D. Redo log files can be renamed in MOUNT state
- E. An SPFILE can be updated when connected to an idle instance
- F. Datafiles can be renamed in MOUNT state

Correct Answer: CDEF

QUESTION 5

As part of a manual upgrade of your database to Oracle Database 12c, you plan to issue the command: SQL> STARTUP UPGRADE

Which three statements are true about the upgrade process? (Choose three.)

- A. All system triggers are disabled during the upgrade process.
- B. Only queries on fixed views execute without errors until you run the catctl.pl script.
- C. The COMPATIBLE parameter must be set to at least 12.1.0 before issuing the command.
- D. All job queues remain active during the upgrade process.
- E. Only connections AS SYSDBA are allowed during the upgrade process.

Correct Answer: ADE
