QUESTION 1

You created a component interface and now must implement it on an online component. The PeopleCode that triggers a component interface is placed on the SavePostChange event. Select the three reasons for placing the PeopleCode on the SavePostChange event? (Choose three.)

- A. SavePostChange event is not field dependent.
- B. SavePostChange is initiated after the Component Processor updates the database.
- C. SavePostChange is generally used to update tables that are not in the component.
- D. An error or warning that is generated in SavePostChange causes the component interface to be canceled, but the component data is saved.
- E. The system issues a SQL commit after the SavePostChange terminates successfully.

Correct Answer: BCE

QUESTION 2

An Application Engine program inserts rows into PS_VENDOR.

The program encounters an error and abends (ends abnormally).

You correct the error, but now PS_VENDOR is in an unknown state.

Select the correct statement.

- A. If Log File was enabled in Configuration Manager, a script file was created that you use to return the database to its original state. After you correct the error, you can run the program again.
- B. If Recover was enabled for the program, the changes to PS_VENDOR are rolled back. After you correct the error, you can run the program again.
- C. If Restart was enabled for the program, a checkpoint was saved with the last commit. After you correct the error, you can restart the program and processing will resume from the point of the last commit.
- D. If Resume was enabled in PeopleSoft Process Scheduler, the program automatically resumes processing after the condition that caused the error is corrected.
- E. If a state record was defined for the program, PS_VENDOR is restored based on parameters that were written to the state record. Then you can restart the program using the same run control parameters.

Correct Answer: C

QUESTION 3

You created a component interface with the standard methods of Create, Find, Get, Cancel, and Save. You secured the component interface and provided full access to all the methods. You want to test the GET method to access the online information. Which three steps will you use to test the GET method? (Choose three.)

- A. Open the component interface in Application Designer.
- B. Right-click in the component interface view and select Test Component Interface.
- C. Save the data by selecting File, Save.
- D. Use the Find option to test the GET method after supplying key values.
- E. Use the Get Existing option to test the GET method after supplying key values.
- F. Enter data in the Component Interface Tester tool.
- G. Validate that the data has been modified and saved by accessing the online component or using the database query tool.

Correct Answer: ABE

QUESTION 4

The Application Engine program PSU_PROC_ORD uses values from PS_PSU_ORDER_DTL and PS_PSU_STOCK_TBL to update PS_PSU_STOCK_TBL.

You tested the following SQL Select statement in your database query tool and it returned the expected results. (Line numbers have been added for clarity.)

1.

```
SELECT a.ORDER_LINE_NBR
```

2.

```
, a.ITEM_CD
```

3.

```
, a.QTY_ORDERED
```

4.

```
, b.QTY_ON_HAND
```

5.

```
FROM PS_PSU_ORDER_DTL a
```

6.

```
, PS_PSU_STOCK_TBL b
```

7.

```
WHERE a.ITEM_CD = b.ITEM_CD
```

You copy and paste the SQL statement to a Do Select action, but it needs to be modified so that it populates the PSU_ORDERS_AET state record.

What do you need to do?

- A. Change line 1 to:%SELECT a.ORDER_LINE_NBR
- B. Add this line before line 1:INSERT INTO PS_PSU_ORDERS_AET
- C. Add this line before line 1:%SELECT (ORDER_LINE_NBR, ITEM_CD, QTY_ORDERED, QTY_ON_HAND)
- D. Add this line before line 1:%UPDATE (ORDER_LINE_NBR, ITEM_CD, QTY_ORDERED, QTY_ON_HAND)
- E. Add this line after line 7:%INSERT (ORDER_LINE_NBR, ITEM_CD, QTY_ORDERED, QTY_ON_HAND)

Correct Answer: C

QUESTION 5

An Application Engine program has a Do While action with the following code:

```
%SELECT (TEMP_FLD)
SELECT \"COUNTER\"
FROM PS_INSTALLATION
WHERE %Bind(COUNTER)
```

What will be the result?

- A. The program will abend because PS_INSTALLATION does not have a COUNTER field.
- B. The Do While action will go into an infinite loop because the Select statement will always return true.
- C. The actions following the Do While action will never execute because the Select will never return true.
- D. The Do While will execute at least once, no matter what the result of the Select.
- E. The Do While will execute as expected, as long as COUNTER is being incremented in PS_INSTALLATION for every loop.
- F. The Do While will execute as expected, as long as COUNTER is being incremented in the state record for every loop.

Correct Answer: F
