QUESTION 5

To meet a business requirement for latency, Carlos wants to break long-running source transactions into shorter commits on the target database with the replicate parameter MAXTRANSOPS what is the most important thing Carlos should consider before using MAXTRANSOPS

- A. Will business logic be lost if transaction boundaries are changed?
- B. Will a large number of small commits perform better than a smaller number of large commits?
- C. Will redo buffer size on the target database be adequate for the commit size?
- D. Will the sequence of operations be affected by changing transaction boundaries?

Correct Answer: D

In reference guide, page 238: "Limitations of use You should have a valid business case for using MAXTRANSOPS other than simply for the purpose of expediency. To use MAXTRANSOPS is to alter the transactional integrity that is imposed by the boundaries that are defined by the source application, even though Replicat applies the operations in the correct order."
