QUESTION 1

How can you name Solaris Volume Manager disksets that include disks from shared storage?

A. You can name them anything you want, often related to what application you may be using them for.

B. The name of the diskset must be the same as the name of the cluster.

C. The Solaris Volume Manager software automatically chooses a name for the diskset, such as ds101 or ds102. You must keep this name.

D. A diskset that is physically attached to nodes named vincent and theo must be named ds_vincent_theo, and there can be only one such diskset.

Correct Answer: A

QUESTION 2

Which task below is correct when creating a storage resource for a failover file system?

A. You must add the entries for zfs file systems to /etc/vfstab.

B. You have to configure the mount at boot option to yes in /etc/vfstab.

C. You have to add an entry for/etc/vfstab on each node for ufs and vxfs file systems.

D. If your file system is on a vxvm disk group, you have to import the disk group manually for the first time.

E. You have to enable your storage resource created with clrs create in a resource group where resources are already online.

Correct Answer: C

QUESTION 3

Your Oracle database is configured with Sun Cluster HA-Oracle using a resource called oracle-rs, and you need to perform a backup of the database files using the tar utility.

Which operation should be performed?

A. none, the database files are accessible and can be backed up safely

B. #clrs disable oracle-rs perform backup #clrs enable oracle-rs

C. #clrs disable oracle-rs manually start database, perform backup #clrs enable oracle-rs

D. #clrs unmonitor oracle-rs perform backup #clrs monitor oracle-rs

Correct Answer: B

QUESTION 4

With Sun Cluster 3.2 it is possible to specify typical or custom installation.

Which two items must you provide to scinstall when perfoming a typical configuration? (Choose two.)

A. cluster name

B. /globaldevices size

C. cluster transport adapters

D. quorum disk name

E. cluster interconnect network address and netmask

F. number of cluster interconnects to be used and switch configuration

Correct Answer: AC

QUESTION 5

You have a scsi-2 quorum device in a two-node cluster. What happens to that quorum device if you change the global fencing policy using the command cluster set -p global_fencing=prefer3?

A. The quorum device is removed from the configuration.

B. The quorum device automatically changes to a scsi-3 device.

C. The per-disk fencing policy for the quorum disk is changed to pathcount.

D. The request to change the global fencing policy is denied, because you have a scsi-2 quorum device.

Correct Answer: C
