100% Passing Guarantee  
100% Money Back Assurance

Following Questions and Answers are all new published by VMware  
Official Exam Center

- ⚙️ **Instant Download** After Purchase
- ⚙️ **100% Money Back** Guarantee
- ⚙️ **365 Days** Free Update
- ⚙️ **800,000+** Satisfied Customers

#### QUESTION 1

Which vSphere 6.x feature allocates available resources among the virtual machines based on pre-defined rules?

- A. Storage vMotion
- B. Dynamic Resource Scheduler
- C. Distributed Power Management
- D. vMotion

Correct Answer: B

Explanation: VMware DRS continuously monitors utilization across the resource pools and intelligently allocates available resources among virtual machines based on resource allocation rules that reflect business needs and priorities. Reference: [https://www.vmware.com/pdf/vmware\\_drs\\_wp.pdf](https://www.vmware.com/pdf/vmware_drs_wp.pdf)

#### QUESTION 2

Which vSphere 6.x feature enables you to mitigate the effects of storage latency during peak load periods in a virtualized data center?

- A. NFS
- B. iSCSI
- C. Network I/O Control
- D. Virtual SAN

Correct Answer: B

#### QUESTION 3

Which storage protocol allows administrators to reduce the total number of network ports used in the network environment?

- A. Fibre Channel over Ethernet
- B. Virtual SAN
- C. Fibre Channel
- D. Network File System

Correct Answer: B

#### QUESTION 4

A network administrator notices that a few virtual machines run slowly every morning. To troubleshoot the issue the administrator needs to analyze the total traffic sent I virtual machines. Which feature would the administrator use for troubleshooting?

- A. Virtual LANs
- B. Traffic Shaping
- C. NetFlow
- D. Port Mirroring

Correct Answer: D

Explanation: I would like to clarify few things in this blog entry about the Port-mirroring feature that is available on vSphere Distributed Switch (VDS). This feature is similar to the port mirroring capability available on the physical switches. Network administrators can use this feature to troubleshoot any network related issues in the virtual infrastructure and monitor virtual\_machine-to-virtual\_machine traffic that is flowing on the same ESXi host. Network administrators use network analyzer tool, which captures traffic, along with the port mirror feature to perform monitoring and troubleshooting activities. In the physical network, depending on where the analyzer or debug tool is placed in the network, network administrators choose different port mirroring options. The following are some of the standard port mirroring options available on physical switches Reference:<http://blogs.vmware.com/vsphere/2012/06/how-to-use-port-mirroring-feature-ofvds-for-monitoring-virtual-machine-traffic.html>

---

#### QUESTION 5

After configuring Fault Tolerance for critical servers, an administrate notices that protected virtual machines run slower than usual. What is the reason for performance reduction of these virtual machines?

- A. Hosts have lower bandwidth for Fault Tolerance logging.
- B. Virtual machines are usually slow after Fault Tolerance logging.
- C. The storage space on the host is low.
- D. Virtual machines are running memory intensive applications.

Correct Answer: A
