QUESTION 1

A company wants to implement a software-defined network solution with minimal impact to the existing environment. What additional hardware, if any, is required when implementing VMware NSX?

- A. A stateful inspection Firewall to take advantage of NSX's built in Firewall protection
- B. None. NSX is a completely non-disruptive solution.
- C. Special VLAN configurations for accessing NSX.
- D. At least two Layer 3 switches that must be converted to trunk mode.

Correct Answer: B

NSX is a completely non-disruptive solution which can be deployed on any IP network from any vendor both existing traditional networking models and next generation fabric architectures. The physical network infrastructure already in place is all that is required to deploy a software-defined data center with NSX.

QUESTION 5

What is the role of the NSX Controller?

- A. It provides network edge security and gateway services to isolate a virtualized network.
- B. It is an advanced distributed state management system that controls virtual networks and overlay transport tunnels.
- C. It is centralized network management component of NSX.
- D. It is software that operates in server hypervisors to form a software abstraction layer between servers and the physical network.

Correct Answer: B
