QUESTION 1

Which endpoint devices must be replaced to support the Streamed VHD method of desktop delivery?

- A. Windows 7
- B. Windows XP
- C. Linux thin clients
- D. PCs running Internet Explorer 7

Correct Answer: C

QUESTION 2

Scenario: CGE needs to define its management process for desktop image releases. Some groups need a process for version control that includes thorough testing prior to production. Why does using Windows Deployment Services and deploying a standard base image to virtual desktops help manage the image versioning process?

- A. It enables rapid rollback.
- B. It automates deployment of current and legacy OS versions.
- C. It leverages Hyper-V snapshots.
- D. It automatically deploys the latest drivers and patches.

Correct Answer: D

QUESTION 3

Scenario: CGE acquires a small energy company that is running MGMT, a proprietary 16-bit application. A Citrix Architect is tasked with deploying this application to the Executives/Management end-user group. The CIO mandates that a FlexCast model must be chosen that resembles this end-user group's existing delivery strategy. It is important that a single-image deployment is utilized and that management effort is kept to a minimum for the update process. The availability of a fast rollback plan must also be available after upgrades, since it can often result in system instability. Why is deploying MGMT in a Hosted Shared environment on Windows Server 2008 R2 with Machine Creation Services the best solution?

- A. It offers a faster change process.
- B. End users are already comfortable working in a shared environment.
- C. It prevents XenApp server crashes.
- D. It enables faster rollbacks.

Correct Answer: A

QUESTION 4

Why does using the IIS Manager console help the company comply with its security policy?

- A. Because it enables you to view IIS logs to extract data
- B. Because it enables you to configure StoreFront
- C. Because it uses a standard TCP port
- D. Because it is a Microsoft Management Console snap-in

Correct Answer: A

QUESTION 5

How should the architect design the image management process using Windows SysPrep?

- A. Prepare an existing machine as the master image.
- B. Install a new Windows image utilizing a XenServer virtual machine and prepare it as the master image and install the delivery agent. Run SysPrep on the virtual machine.
- C. Use a XenServer virtual machine to install a new Windows image with MAK and prepare it as the master image. Ensure that the image has two network cards.
- D. Run XenConvert on an existing machine.

Correct Answer: C
