QUESTION 1

How should the architect use XenConvert to facilitate image management?

A. To convert from a single server image to a hypervisor template

B. To convert from a single server image into a virtual disk in VHD format

C. To perform mass conversion of virtual machines to XenServer virtual machines

D. To perform an unattended conversion of a virtual machine to XenServer

Correct Answer: B

QUESTION 2

Scenario:

CGE\\'s CIO asks a Citrix Architect to design its Hypervisor networking solution. The storage team informs the architect that they have purchased a new 10GB iSCSI SAN array that the XenServer hosts will use for SAN storage. They would like the solution to meet all outlined requirements.

What should the architect recommend?

A. Each XenServer host should be configured with six 10GB network interfaces - four dedicated for storage traffic, one for management traffic, and one for guest virtual machine (VM) network traffic.

B. Each XenServer host should be configured with four 10GB network cards - two bonded for storage and management separated by separate VLAN, and two bonded for guest VM networks.

C. Each XenServer host should be configured with two bonded 10GB NICs for storage, management, and guest VM networking.

D. Each XenServer host should be configured with four 10GB NICS - two dedicated for storage, and two bonded for guest VM networks and management separated by VLAN.

Correct Answer: D

QUESTION 3

Scenario: The company needs to ensure that the provisioning traffic does NOT interfere with the existing PXE solution. The Provisioning Services servers will be connected to a 10 Gbps network.

How should the architect implement a highly available Provisioning Services server on dedicated VLANs?

A. By installing multiple NICs in one Provisioning Services server in each datacenter

B. By deploying one Provisioning Services server in the primary and one in the secondary datacenter

C. By deploying two Provisioning Services servers in each datacenter

![Pass2Lead logo](https://Pass2Lead.com)
D. By using NetScaler with GSLB to load balance the Provisioning Services servers in each datacenter

Correct Answer: C

QUESTION 4

All nurses currently use Windows XP workstations to access critical medical applications and require different applications depending on their role. Which two delivery models meet the nurses\\' requirements? (Choose two.)

A. Local VM deployment with streamed applications

B. Streamed VHD deployment with streamed applications

C. Hosted server OS deployment with locally installed applications

D. Hosted desktop OS deployment with locally installed applications

Correct Answer: CD

QUESTION 5

Scenario:

CGE\\'s security officer states that, for compliance reasons, all network traffic between Delivery Controllers,

StoreFront servers, and NetScalers must be encrypted.

Which type of encryption should a Citrix Architect recommend?

A. SecureICA

B. IPsec

C. SSL

D. L2TP

Correct Answer: C
