QUESTION 1

Scenario: A Citrix Architect is designing a Citrix Virtual Desktops environment. The Graphic Designers Group uses graphic-intensive applications. Graphic designers will be provided with a Windows 10-hosted assigned desktop, with NVIDIA graphics hardware acceleration. HDX 3D Pro mode was selected during the installation of the Virtual Delivery Agent (VDA).

What is the maximum number of monitors supported for the Graphic Designers Group?

B. 1

C. 2

D. 8

Correct Answer: D

QUESTION 2

Scenario: A Citrix Architect is designing a new Citrix Virtual Apps and Desktops environment. While performing a capabilities assessment of the existing infrastructure, it was discovered that there are issues with load balancing users, and that the existing load-balancing hardware is outdated.

Which capability risk will the architect need to investigate to address these issues?

A. Windows Server and Active Directory (AD) environments.

B. Citrix Virtual Apps and Desktops environments

C. Network architecture

D. Access infrastructure

Correct Answer: C

QUESTION 3

Scenario: A Citrix Architect is designing a new Citrix Virtual Apps and Desktops environment. The customer previously installed all applications locally on managed laptops and desktops, but is willing to evaluate other application delivery methods as part of the new deployment. The environment will be standardized on Windows 10 for the Virtual Delivery Agent (VDA) machines.

As part of an application analysis performed earlier in the project, the information in the exhibit was collected regarding 1 of the required applications.

Click the Exhibit button to view the information.

Category	Detail
Application Name	Visual Studio
Description	The application is used to develop computer programs, websites, web apps, web services, and mobile apps.
Usage	The application will be used by developers working in the organization.
OS Compatibility	The application is compatible with the target operating systems.
Special Considerations	The users are internal and external contractors, third-party collaborators, and other provisional team members who do NOT require offline access to the application. The application contains a number of Windows services.

The customer\\'s security policies mandate that all development software must run within the corporate data center, but should appear to the user as if it is running locally on the virtual machine (VM).

How should the architect recommend deploying the application?

A. Use Desktop OS machines to deliver VM hosted applications.

B. Install it directly on the endpoint devices, and include it in a virtual desktop session using the Local App Access feature.

C. Install it in an Application Layer using Citrix App Layering, then present it to users as an Elastic Layer during a virtual a virtual desktop session.

D. Stream it to a VDA machine using Microsoft App-V, and access it through a virtual desktop session.

E. Push it to users with a Workspace Environment Management (WEM) action option.

Correct Answer: D

QUESTION 4

Scenario: A Citrix Architect is designing a new Citrix Virtual Apps and Desktops environment. Currently,

the environment is configured as 2 locations with identical Citrix Virtual Desktops Sites. Each Site has 2

Delivery Controllers, 2 StoreFront servers, and 1 Citrix ADC high-availability pair. The same applications

have been published from both Sites for all users. Two zones (Zone A and Zone B) are configured in each

Site with 1 Delivery Controller in each zone. The Microsoft Exchange server is only accessible from Virtual

Delivery Agent (VDA) machines in Zone A in each Site.

Six access requirements have been identified:

Users should have a single URL when accessing resources from different Sites.

Users should always connect to the data center closest to their location.

Applications added to Favorites within the Citrix Workspace app should be retained when accessed from

different Sites.

Launched applications and desktops should always connect through a local Citrix ADC.

No duplication of applications published from different Sites.

Microsoft Outlook should always launch in Zone A.

What should the architect recommend configuring to avoid duplication of the same applications being

delivered from different Sites?

A. `Keywords: Featured\\' in the properties of the published applications

B. An Application Group

C. Zone preferences for VDA machines hosting the applications

D. Aggregate resources

Correct Answer: D

QUESTION 5

Scenario: A Citrix Architect is designing a new Citrix Virtual Apps and Desktops environment. Currently,

the environment is configured as 2 locations with identical Citrix Virtual Desktops Sites. Each Site has 2

Delivery Controllers, 2 StoreFront servers, and 1 Citrix ADC high-availability pair. The same applications

have been published from both Sites for all users. Two zones (Zone A and Zone B) are configured in each

Site with 1 Delivery Controller in each zone. The Microsoft Exchange server is only accessible from Virtual

Delivery Agent (VDA) machines in Zone A in each Site.

Six access requirements have been identified:

Users should have a single URL when accessing resources from different Sites.

Users should always connect to the data center closest to their location.

Applications added to Favorites within the Citrix Workspace app should be retained when accessed from

different Sites.

Launched applications and desktops should always connect through a local Citrix ADC.

No duplication of applications published from different Sites.

Microsoft Outlook should always launch in Zone A.

What should the architect recommend configuring subscription synchronization to retain applications

added to Favorites?

A. Within server groups of each Site

B. Between stores across the Sites

C. Between server groups across the Sites

D. Within stores of each Site

Correct Answer: D
