QUESTION 1

Scenario: A Citrix Architect needs to assess a Citrix Virtual Apps and Desktops environment. The Citrix Virtual Apps and Desktops diagram in the exhibit gives details about the current Site and zone design.

Click the Exhibit button to view the diagram.
Which statement is correct if all Delivery Controllers in the Primary Zone fail?

A. Satellite Zone 2 will be promoted and the Primary Zone Virtual Delivery Agent (VDA) machines will register within Satellite Zone 2.

B. Virtual Delivery Agent (VDA) machines in the Primary Zone will NOT register within Satellite Zone 1 or Satellite Zone 2.

C. Virtual Delivery Agent (VDA) machines in the Primary Zone will register within Satellite Zone 2.

D. Virtual Delivery Agent (VDA) machines in the Primary Zone will register within Satellite Zone 1.

Correct Answer: A

QUESTION 2

A Citrix Architect is designing the Access Layer for a company that supports active-active mode for Citrix Gateway, as well as an on-premises, two-factor authentication solution.

![Pass2Lead](https://Pass2Lead.com)
Which feature supports this requirement?

A. Citrix ADC Standard edition or higher

B. Citrix ADC Cluster

C. High-availability pair

D. Citrix Gateway Service

Correct Answer: A

QUESTION 3

Scenario: The IT team of a company configured its Citrix environment on Microsoft Azure. Load on the servers is nominal during the off season, but during peak season, load increases on the infrastructure servers. This load varies from year to year. A Citrix Architect is asked to design a solution that dynamically increases and decreases the number of infrastructure servers.

What should the architect recommend the IT team create in Microsoft Azure to meet this demand?

A. Availability sets

B. Resource group

C. Scale sets

D. Availability domains

Correct Answer: B

QUESTION 4

Scenario: A Citrix Architect is using LDAP as single-factor authentication (SFA). The architect is migrating the environment to Citrix Cloud and wants to retain the same authentication, procedure for Citrix Virtual Apps and Desktops service in Citrix Cloud.

Which deployment strategy should the architect use for the Access Layer to ensure that the solution reduces management and does NOT incur additional costs?

A. Use Citrix Cloud Gateway service and Citrix Cloud Workspace.

B. Set up Citrix ADC with bring-your-own license (BYOL) and StoreFront in a public cloud.

C. Set up Citrix ADC VPX and StoreFront on premises.

D. Use Citrix Cloud Gateway service and on-premises StoreFront.

Correct Answer: C

QUESTION 5

Scenario: A Citrix Architect is designing a new Citrix Virtual Apps and Desktops environment. The customer previously installed all applications locally on managed laptops and desktops but is willing to evaluate other application delivery methods as part of the new deployment. The environment will be standardized on Windows 10 and Windows Server 2016 for the Virtual Delivery Agent (VDA) machines.

As part of an application analysis performed earlier in the project, the information in the exhibit was collected regarding 1 of the required applications.

Click the Exhibit button to view the information.

Category	Detail
Application Name	Workspace Lidar Analyzer
Description	The application processes and generates reports using large amounts of imaging data collected from a Lidar scanner attached to the user endpoint.
Usage	The application is used by 5 technicians in the Research and Development (R&D) department.
OS Compatibility	The application is compatible with the target operating systems.
Special Considerations	Technicians must frequently reference this application's data when making log entries in a different application that, for security reasons, is only available through a virtual desktop session.

Technicians must occasionally conduct outdoor field experiments with the Lidar scanner, and must connect to the environment using a wireless mobile connection. |

The customer has the additional objective of minimizing the amount of network traffic in the environment, particularly on WAN or metered links.

How should the architect deploy the application?

A. Stream it to a VDA machine using Microsoft App-V, and access it through a virtual desktop session

B. Install it directly on a VDA machine image, and access it through a virtual desktop session

C. Install it directly on a Server OS VDA machine, and access it from the endpoint as a published application

D. Install it directly on endpoint devices, and include it in a virtual desktop session using the Local App Access feature

E. Install it in the Application Layer using Citrix App Layering

Correct Answer: B
