QUESTION 1

View the SPFILE parameter settings in the Exhibit.

```
*.audit_file_dest='/u01/app/oracle/admin/orcl/adump'
*.audit_trail='db'
*.compatible='11.1.0.0.0'
*.control_files='/u01/app/oracle/oradata/orcl/control01.ctl','/
u01/app/oracle/oradata/orcl/control02.ctl','/u01/app/oracle/ora
data/orcl/control03.ctl'
*.db_block_size=8192
*.db_domain='us.oracle.com'
*.db_name='orcl'
*.db_recovery_file_dest='/u01/app/oracle/flash_recovery_area'
*.db_recovery_file_dest_size=2147483648
*.sga_target=436207616
*.dispatchers='(PROTOCOL=TCP) (SERVICE=orclXDB)'
*.filesystemio_options='ASYNCH'
*.job_queue_processes=1000
*.memory_max_target=629145600
*.memory_target=629145600
*.open_cursors=300
*.processes=150
*.remote_login_passwordfile='EXCLUSIVE'
*.statistics_level='BASIC'
orcl.resource_manager_plan='FORCE:'
*.undo_tablespace='UNDOTBS1'
```

You issue this command and get errors:

SQL> startup ORA-00824:cannot set SGA_TARGET or MEMORY_TARGET due to existing internal settings, see alert log for more information

Why did the instance fail to start?

A. because pga_aggregate_target is not set

B. because statistics_level is set to basic

C. because memory_target and memory_max_target cannot be equal

D. because sga_target and memory_target are both set

Correct Answer: B

QUESTION 2

Flashback Data Archive has been configured to retain data on all transactions that modify a table for a

period of four years.

Three years later, it is decided to change the retention period.

You execute this command:

SQL> ALTER FLASHBACK ARCHIVE fda1 MODIFY RETENSION RETENTION 2 YEAR;

Which is true?

A. An error is returned because the retention period cannot be reduced.

B. Data from the first and third years is purged from the flashback archive FDA1.

C. Flashback archive FDA1 retains all data and the retention period is increased by 2 years.

D. Data older than two years, if any, is purged from the flashback archive FDA1.

E. Data from the third year is purged from the flashback archive FDA1.

Correct Answer: C

QUESTION 3

You take regular backups of one of your production databases by using RMAN with a recovery catalog.

You have added two new tablespaces to this database which must be included in future backups.

Which process occurs which allows the new backups to contain the new datafiles?

A. The target database control file is synchronized from the recovery catalog with a full resync at the next backup.

B. The target database control file is synchronized from the recovery catalog with a partial resync at the next backup.

C. The recovery catalog is synchronized from the target database control file with a full resync at the next backup.

D. The recovery catalog is synchronized from the target database control file with a partial resync at the next backup.

Correct Answer: A

QUESTION 4

You plan to duplicate the multitenant container database (CDB) cdb1 that contains the pluggable database (PDB)
SALES:

![Pass2Lead](https://Pass2Lead.com)
```
RMAN>       DUPLICATE TARGET DATABASE TO cdbdup
            PLUGGABLE DATABASE sales
            FROM ACTIVE DATABASE
            PASSWORD FILE
            SPFILE
            NOFILENAMECHECK;
```

Which two statements are true? (Choose two.)

A. The root and seed databases are included in the duplication.

B. Only the SALES PDB is duplicated as the non-CDB CDBDUP.

C. A backup of the SALES PDB must exist before the execution of the command.

D. An auxiliary instance must have been started with the initialization parameter ENABLE_PLUGGABLE_DATABASE set to TRUE.

E. RMAN must be connected to a recovery catalog for the execution of the command.

Correct Answer: AD

D: When duplicating a whole CDB or one more PDBs:

You must create the auxiliary instance as a CDB. To do so, start the instance with the following declaration in the initialization parameter file: enable_pluggable_database=TRUE

A: To duplicate PDBs, you must create the auxiliary instance as a CDB. To do so, start the instance with

the declaration enable_pluggable_database=TRUE in the initialization parameter file. When you duplicate one or more PDBs, RMAN also duplicates the root (CDB$ROOT) and the seed database (PDB$SEED). The resulting duplicate database is a fully functional CDB that contains the root, the seed database, and the duplicated PDBs.

QUESTION 5

You want to reduce fragmentation and reclaim unused space for the sales table but not its dependent objects. During this operation, you want to ensure the following:

A. Long-running queries are not affected.

ii. No extra space is used.

iii. Data manipulation language (DML) operations on the table succeed at all times throughout the process.

iv. Unused space is reclaimed both above and below the high water mark.

Which alter TABLE option would you recommend?

B. DEALLOCATE UNUSED

C. SHRINK SPACE CASCADE

D. SHRINK SPACE COMPACT

E. ROW STORE COMPRESS BASIC

Correct Answer: C
