QUESTION 1

Which two are true about the creation of a Data Guard Broker configuration?

A. in a broker configuration, the primary database name must match the DB_UNIQUE_NAME value in the database initialization parameter file.

B. A primary database profile may be added to the configuration prior to creating the primary database.

C. A standby database profile may be added to the configuration prior to creating that standby database.

D. A newly created broker configuration requires at least one standby database profile to be specified at the time the configuration is created.

E. A newly created broker configuration is in the disabled state

Correct Answer: DE

QUESTION 2

Which three are true concerning Automatic Block Media Recovery in a Data Guard environment when running an application as an ordinary Oracle user?

A. Real Time Query must be enabled on the primary database

B. Real Time Query must be enabled on the physical standby database.

C. |f a physically corrupt block is discovered on a physical standby database, then a valid block image from the primary database is retrieved.

D. If a physically corrupt block is discovered on the primary database, then a valid block image from a physical standby database is retrieved

E. if a physically corrupt block is discovered on a logical standby database, then a valid block image from the primary database is retrieved.

F. If a physically corrupt block is discovered on a primary database, then a valid block image from the logically standby database is retrieved.

Correct Answer: BCD

QUESTION 3

Which two are true about rolling release upgrades in a Data Guard environment?

A. The background process DMON must be enabled on the primary and standby databases during a rolling release upgrade procedure

B. A physical standby database can be converted to a logical standby database temporarily.

C. Rolling release upgrades require the background process RVWR to write flashback logs on the standby database.

![Pass2Lead](https://Pass2Lead.com)
D. The KEEP IDENTITY clause ensures that a logical standby database keeps the same DBID as the primary database.

E. The recovery point objective increases proportionally to the duration of the rolling release upgrade procedure.

Correct Answer: BD

QUESTION 4

Which two Data Guard features require the use of flashback database by the broker?

A. Read-Mostly physical standby implementations

B. Far Sync Instances

C. Fast-Start Failover

D. Real Time Query

E. Snapshot Standby databases

Correct Answer: CE

QUESTION 5

Which four are true about DGMGRL show command?

A. It can be used to show properties of a pluggable standby database.

B. it can be used to show properties of a pluggable primary database.

C. it can be used to show instance-specific properties for a RAC database.

D. it can be used to show properties of a far sync instance

E. it can be used to show Fast Start Failover properties.

F. It can be used to show properties of a primary container database.

Correct Answer: ABEF
