QUESTION 1

During a Oracle Procurement Cloud implementation, you are going to implement Purchasing and Self Services Procurement. Identify the configuration step that will ensure that the tasks related to the other Procurement Cloud products like Supplier Portal Cloud are not available in Functional Setup Manager (FSM) during configuration.

A. Enable tasks related to Supplier Model during Configure Offering

B. Enable only `Purchasing\\' and `Self Service Procurement\\' during Configure Offering.

C. Enable `Procurement\\' pillar and do not assign the tasks to the implementation consultant in FSM.

D. Enable all modules during Configure Offerings and disable the tasks related to unrelated modules in FSM.

Correct Answer: B

Provisioning Offerings

The Provisioned column on the Configure Offerings page shows whether or not an offering is provisioned.

While you are not prevented from configuring offerings that have not been provisioned, ultimately the users are not able to perform the tasks needed to enter setup data for those offerings until appropriate enterprise applications (Java EE applications) are provisioned and their location (end point URLs) is registered. Identify four actions that the Manage Requisition Approval task enables you to perform.

A. enable or disable a participant

B. define rule actions by using Supervisory Hierarchy or Position Hierarchy

C. create rules by using simple or nested conditions

D. register an internal and external Supplier

E. maintain user-defined attributes and use these attributes with rules

Correct Answer: ABCE

The new Manage Requisition Approval task provides a simple and user-friendly interface for approval rules

management. This task allows you to:

Enable or disable a participant.

Create rules using simple or nested conditions. Condition attributes displayed in this interface are

consistent with the attribute names displayed in the application. Attribute values can be chosen from a List

of Values or a Choicelist, when applicable.

Define rule actions that:

Use Supervisory Hierarchy, Job Level, Position Hierarchy, Approval Group, Single User, or Custom

routings.

Require approvals, automatically approve, or send information notifications.

Mark a rule active or inactive.

Maintain user-defined attributes and use these attributes across rules. o Currency based attributes are

used to setup conversions of amount or price type attributes to a specific currency used in rule evaluations.

Custom attributes are used to achieve complex approval requirements and custom approval lists and map

to the Procurement Custom Function output.

Summation attributes support the aggregation of data across lines or distributions based on a set of filters.

The filters can be set up using requisition attributes or based on roll-ups in the Procurement Category

Hierarchy, Cost Center, Balancing Segment, Management Segment, or Natural Account hierarchies
