QUESTION 1

You are analyzing the JMSDeliveryMode header field for all the messages for all the queues deployed to your JMSServer.

Which two values do you expect to find for this header? (Choose two.)

A. PERSISTENT

B. NON_PERSISTENT

C. TRANSIENT

D. PERMANENT

E. MULTIMODE

F. EXACTLY_ONCE

Correct Answer: AB

JMSDeliveryMode specifies PERSISTENT or NON_PERSISTENT messaging.

Reference: http://docs.oracle.com/cd/E12840_01/wls/docs103/jms/fund.html

QUESTION 2

A current production WebLogic Server (WLS) domain needs to be upgraded without affecting the users. What are the five steps to follow for a Rolling Update? (Choose five.)

A. Back up the contents of your domain.

B. Use pack and unpack to upgrade each of the servers in the machine.

C. Shut down the servers in a single machine.

D. Repeat the process for all machines in the domain.

E. Restart the servers in the machine.

F. Repeat the process for all domains in the machine.

G. Upgrade the servers in the machine.

Correct Answer: ACDEG

A: Before you begin the upgrade process, make sure that you take any necessary precautions such as:

*

Back up your applications, database schema, other application data, and domains.

*

If required, obtain latest third party plug-ins or components that are compatible with required non-Oracle components. For example, Apache Web Server libraries.

CGED: The rolling upgrade process includes stopping the Administration Server, installing the upgrade, restarting the Administration Server, and then doing the same for each Managed Server in the cluster (machine).

Reference: http://docs.oracle.com/cd/E14571_01/web.1111/e13754/rolling_upgrade.htm#WLUPG268

QUESTION 3

You have a multithreaded application that looks up the WebLogic JMS ConnectionFactory object from the JNDI tree.

Which statement is correct in this scenario? (Choose the best answer.)

A. It is not permitted. A multithreaded application cannot access the ConnectionFactory object.

B. The access to ConnectionFactory object MUST be synchronized.

C. The ConnectionFactory object can be referenced in a multithreaded application without any special considerations.

D. Multiple threads trying to use the ConnectionFactory object simultaneously will throw an exception.

E. In a multithreaded scenario, connection objects cannot be safely created from the ConnectionFactory.

Correct Answer: B

A connection factory supports concurrent use, enabling multiple threads to access the object

simultaneously.

A session and its message producers and consumers can only be accessed by one thread at a time (i.e.

the access must be synchronized). Their behavior is undefined if multiple threads access them

simultaneously.

Incorrect Answers:

A, E: A connection factory supports concurrent use, enabling multiple threads to access the object

simultaneously.

C, D: A session and its message producers and consumers can only be accessed by one thread at a time.

Their behavior is undefined if multiple threads access them simultaneously.

QUESTION 4

You are tasked with doing a rolling upgrade of a production domain that will minimize service interruptions.

![Pass2Lead Logo](https://Pass2Lead.com)
Which is a characteristic of a rolling update? (Choose the best answer.)

A. All the managed servers and node managers need to be shut down.

B. Configuration changes can be made during the rolling update process.

C. An automated backup is part of the rolling update process.

D. The machine hosting the Administration Server must be upgraded first.

E. A major upgrade, for example 11g to 12c, can be accomplished with a rolling update.

Correct Answer: E

Rolling upgrade applies only to upgrades within a major product version. For example, you can upgrade from 10.0 to 10.3.1, but cannot upgrade from 9.0 to 10.0. Reference: https://docs.oracle.com/cd/E15523_01/web.1111/e13754/rolling_upgrade.htm#WLUPG272

QUESTION 5

A client application asynchronously receives the message sent to a JMS Queue. The client is going to send a response to the sender.

Which two JMS Header fields from the original message are used to send the response? (Choose two.)

A. JMSResponseMode

B. JMSTimeStamp

C. JMSDeliveryMode

D. JMSCorrelationID

E. JMSReplyTo

Correct Answer: DE
