### QUESTION 2

I want to configure automatic migration of pinned services from an unhealthy server to another target in the cluster. I wish to configure consensus leasing for this purpose.

Which two statements are true in this scenario? (Choose two.)

- A. Set the cluster "Migration Basis" policy to Consensus.
- B. Migratable server should be associated with a node manager.
- C. Set the server "Migration Basis" policy to Consensus.
- D. A high availability database must be configured to manage consensus leasing information.

Correct Answer: AC

A: Using the Automatic Migration option requires setting a cluster's Migration Basis policy to either Database or Consensus leasing.

C: Setting Migration Basis to Consensus leasing means that the member servers maintain leasing information in-memory, which removes the requirement of having a high-availability database to use leasing. This version of leasing requires that you use Node Manager to control servers within the cluster.

#### QUESTION 5

You are tasked with doing a rolling upgrade of a production domain that will minimize service interruptions.

Which is a characteristic of a rolling update? (Choose the best answer.)

- A. All the managed servers and node managers need to be shut down.
- B. Configuration changes can be made during the rolling update process.
- C. An automated backup is part of the rolling update process.
- D. The machine hosting the Administration Server must be upgraded first.
- E. A major upgrade, for example 11g to 12c, can be accomplished with a rolling update.

Correct Answer: E

Rolling upgrade applies only to upgrades within a major product version. For example, you can upgrade from 10.0 to 10.3.1, but cannot upgrade from 9.0 to 10.0. Reference:
