QUESTION 1

Assume that MySQL Enterprise Monitor is configured to monitor MySQL 5.6 or a later instance. Which three features are available?

A. Deploying MySQL Agent on supported target operating system

B. Tracing import and export with mysqldump

C. Monitoring the availability of the MySQL instance

D. Creating E-Mail Alerts and SNMP Traps for MySQL Warnings

E. Starting and Stopping the MySQL Instance

F. Analyzing executed MySQL queries

Correct Answer: ABD

QUESTION 2

You have three machines with MySQL Databases running on Linux platform.

Which backup procedures would allow online and remote backup of the MySQL Database on three machines to a connected Storage NFS?

A. 1. Mount the Remote Storage NFS volume to each of the three machines with proper privilege for the backup OS user to have all access.

2.

 Install MySQL Enterprise Backup on machine which is used to start the backup.

3.

 Start mysqlbackup on only one machine with the installation to back up the databases for the three machines to the mounted volume using - -backup-dir and by giving --hosts=machine1:port1, machine2:port2, machine3:port3.

4.

 Validate the backups using the mysqlbackup program to ensure that the backups created are valid.

B. 1. Mount the Remote Storage NFS volume to each of the three machines with proper privilege for the backup OS user to have all access.

2.

 Install MySQL Enterprise Backup on all three machines.

3.

 Start mysqlbackup on all machines to back up the database to the mounted volume using - -backup-dir.

4.

 Validate the backup using the mysqlbackup program to ensure that the backup created is valid.

C. 1. Mount the Remote Storage NFS volume to each of the three machines with proper privilege for the backup OS user to have all access.

2.

 Install MySQL Enterprise Backup on the machine that is used to start the backup.

3.

 Start mysqlbackup on only one machine with the installation to back up the databases for the three machines to the mounted volume using - - backup-dir and by specifying -- config-files=my1.cnf, my2.cnf, my3.cnf.my1.cnf, my2cnf, and my3.cnf are the MySQL Database Configuration files on the three machines.

4.

 Validate the backup by using the mysqlbackup program to ensure that the backup created is valid.

D. 1. Mount the Remote Storage NFS volume to each of the three machines with proper privilege for the backup OS user to have all access.

2.

 Install MySQL Workbench on a separate machine, which is used to connect to the three machines to back up and restore.

3.

 Startup MySQL backup from MySQL Workbench to back up the three databases.

4.

 Validate the backup by using MySQL Workbench to ensure that the backup created is valid.

Correct Answer: B

QUESTION 3

After the installation of the MySQL Server, you cannot find MySQL Utilities. How would you correct the problem?

A. MySQL Utilities comes with MySQL Enterprise Monitor. Download MySQL Enterprise Monitor to install.

B. MySQL Utilities is installed with MySQL Server Binary. Put the MySQL bin folder into PATH to allow execution.

C. MySQL Utilities is a package from MySQL Connector. Download the MySQL/Connector and install.

D. MySQL Utilities comes with MySQL Enterprise Backup. Download MySQL Enterprise Monitor to install.

E. MySQL Utilities is a package of utilities that are used for maintenance and administration of MySQL servers. Download the MySQL Utilities separately from www.mysql.com.

Correct Answer: E
