QUESTION 1

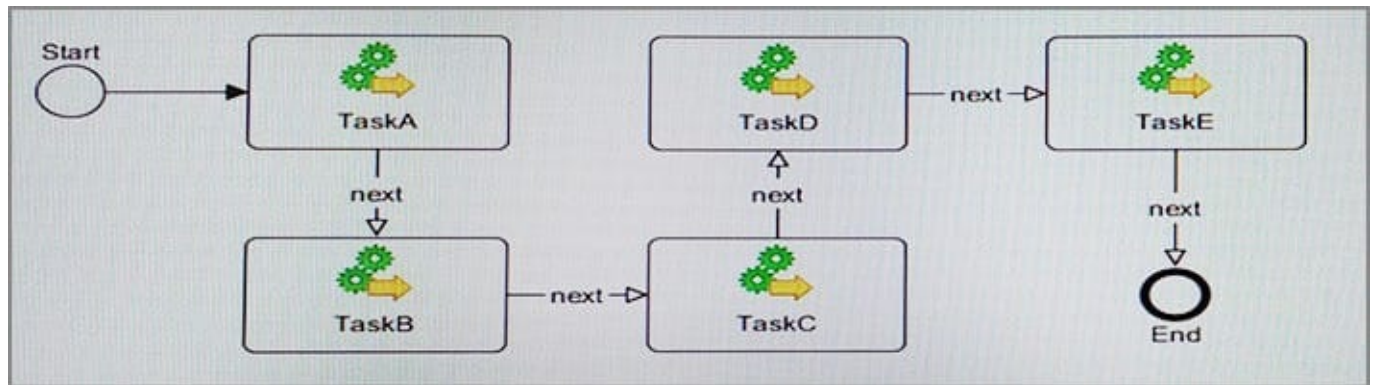

While testing your OSM solution, you find that an XQuery expression is not working as expected. After extensive testing and checking, you find that it is not related to development issues or recent changes in the environment. You believe that it is a product defect related to ID generation of order items. Which statement is true about the next step that you should perform?

- A. You should raise a Service Request in Oracle Support, including an accurate description and all significant information (appropriate sections of log files, server and OSM configuration, and installed components and patches).
- B. You should contact your local sales representative to forward the issue to the product team, providing relevant information to identify the bug (environment details and testing evidences).
- C. You should first search in Oracle Technology Network (OTN) Forums, filtering by your actual OSM version, to find if the issue has already been reported and to get an application patch if available.
- D. You can search in the Knowledge Base, where you find the official database of known common issues and how to address them, before raising a Service Request in Oracle Support.

Correct Answer: D

QUESTION 2

OSM is executing an order with the process indicated in the diagram. Immediately after the completion of TaskD, a revision is received, which causes only TaskB to be re-evaluated. During the re-execution of TaskB, a significant data element used by TaskA and TaskD is updated in the order. Which task is reevaluated when the compensation for TaskB completes?

- A. TaskA
- B. TaskB
- C. TaskC
- D. TaskD
- E. TaskE

Correct Answer: D

QUESTION 3

When submitting orders for testing, you notice that order items are being correctly displayed in the OSM Web client, but no order components are being generated in your orchestration plan. What would you check to find the root cause of the issue?

- A. if the property that is indicated as Order Item Name Property has a valid value
- B. if the property that is indicated as Product Specification Mapping Property has a valid value
- C. if the task data of the Creation Task associated with the order that is being tested contains the ControlData structure
- D. if the order that is submitted for testing contains at least one order item payload
- E. if the XQuery expression associated with the order item property that stores the order item's XML payload has any errors

Correct Answer: C

QUESTION 4

You must provide an interface to an upstream system to cancel orders in OSM without manual intervention. What is one interface that could be used to perform this activity?

- A. the "CancelOrder" web service function
- B. the OSM database
- C. the "DeleteOrder" XML API function
- D. the Task Web client
- E. the Order Management Web client

Correct Answer: E

QUESTION 5

You have an XQuery automation plugin that performs several interactions with OSM, including searching for orders, getting detailed order information based on search results, and deciding whether to suspend those orders or not. What interface would you suggest to be used by this plugin in order to perform these interactions?

- A. web service
- B. OSM database
- C. XML API
- D. Task Web client
- E. Order Management Web client

Correct Answer: C
