QUESTION 1

Which two tasks must you perform to configure PPPoE on an interface? (Choose two)

A. Create a client dialer pool.

B. Enable PPPoE logging.

C. Enable PPPoE on the interface.

D. Enable PPPoE globally.

E. Configure a loopback interface.

Correct Answer: CE

QUESTION 2

What is the result of issuing the frame-relay map ip 192.168.1.2 202 broadcast command?

A. defines the destination IP address that is used in all broadcast packets on DCLI 202

B. defines the source IP address that is used in all broadcast packets on DCLI 202

C. defines the DLCI on which packets from the 192.168.1.2 IP address are received

D. defines the DLCI that is used for all packets that are sent to the 192.168.1.2 IP address

Correct Answer: D

This command identifies the DLCI that should be used for all packets destined to the 192.168.1.2 address. In this case, DLCI 202 should be used.

QUESTION 3

Which three are characteristics of an IPv6 anycast address? (Choose three.)

A. one-to-many communication model

B. one-to-nearest communication model

C. any-to-many communication model

D. a unique IPv6 address for each device in the group

E. the same address for multiple devices in the group

F. delivery of packets to the group interface that is closest to the sending device

Correct Answer: BEF

A new address type made specifically for IPv6 is called the Anycast Address. These IPv6 addresses are global addresses, these addresses can be assigned to more than one interface unlike an IPv6 unicast address. Anycast is designed to send a packet to the nearest interface that is a part of that anycast group. The sender creates a packet and forwards the packet to the anycast address as the destination address which goes to the nearest router. The nearest router or interface is found by using the metric of a routing protocol currently running on the network. However in a LAN setting the nearest interface is found depending on the order the neighbors were learned. The anycast packet in a LAN setting forwards the packet to the neighbor it learned about first.

QUESTION 4

After you configure a GRE tunnel between two networks, the tunnel comes up normally, but workstations on each side of the tunnel cannot communicate. Which reason for the problem is most likely true?

A. The tunnel source address is incorrect.

B. The tunnel destination address is incorrect.

C. The routebetween the networks is undefined.

D. The IP MTU is incorrect.

E. The distance configuration is missing.

Correct Answer: D

QUESTION 5

Which of the following are benefits of VLANs? (Choose three.)

A. They increase the size of collision domains.

B. They allow logical grouping of users by function.

C. They can enhance network security.

D. They increase the size of broadcast domains while decreasing the number of collision domains.

E. They increase the number of broadcast domains while decreasing the size of the broadcast domains.

F. They simplify switch administration.

Correct Answer: BCE

When using VLAN the number and size of collision domains remain the same ->. VLANs allow to group users by function, not by location or geography ->. VLANs help minimize the incorrect configuration of VLANs so it enhances the security

of the network ->.

VLAN increases the size of broadcast domains but does not decrease the number of collision domains ->.

VLANs increase the number of broadcast domains while decreasing the size of the broadcast domains which increase the utilization of the links. It is also a big advantage of VLAN ->.

VLANs are useful but they are more complex and need more administration ->.
