QUESTION 1

Which two concepts describe test-driven development? (Choose two.)

- A. User acceptance testers develop the test requirements.
- B. It enables code refactoring.
- C. Tests are created when code is ready for release.
- D. Implementation is driven by incremental testing of release candidates.
- E. Write a test before writing code.

Correct Answer: BE

https://www.tutorialspoint.com/software_testing_dictionary/release_candidate.htm

QUESTION 2

Refer to the exhibit.

```
import requests
from requests.auth import HTTPBasicAuth
from config import url, username, password
response = requests.login(url, auth=HTTPBasicAuth (username, password), verify=False)
print response.status_code
```

The script returns an output of 401. To use the supplied URL, an HTTP GET request must be sent with an Authorization header. The header value is a Base64 encoded concatenation of the username and password. Which action must be taken to return an output of 200?

- A. Change the verify=False setting in the request to verify=True to enable HTTP Basic authentication
- B. Modify the method from LOGIN to GET and supply the username ;password value as JSON payload
- C. Verify that the username and password values imported from the configuration file are still valid.
- D. Insert an Authorization header with the values username password from the supplied configuration file.

Correct Answer: B

This seems like a trick question. Simply changing "login" to "get" should fix it. You're still keeping the HTTPBasicAuth header intact while also sending the user/pass in the json payload according to this answer. Sending it in the payload shouldn't do anything since it's a simple GET. The payload will be ignored and the basic auth header will be used.

QUESTION 3

Which process does a developer use to import a string and convert the file into a Python data structure?

- A. parsing
- B. exploding
- C. serializing
- D. translating

Correct Answer: A

QUESTION 4

Refer to the exhibit.

```
$ find /home/user/backup -mtime +30 -type f -print  
$ find /home/user/backup -mtime +30 -type f -delete
```

An engineer is managing the network of an enterprise. The network is using a distributed deployment model. The enterprise uses database to store logs. The current policy requires logs to be stored if changes are made to the infrastructure in any of the devices on the data centers. Which workflow is being automated by the Bash script?

- A. returning backup files that are older than 30 days
- B. deleting backup files that are older than 30 days
- C. configuring the directory to delete files automatically
- D. automating deletion of all backup files every 30 days

Correct Answer: B
