Correct Answer: DE

:

Transcoding of recorded calls into streaming and downloadable file formats, including Windows Media, Flash, and MPEG4 formats

Cisco Pulse Video Analytics-an option on the MXE 3500-delivers a powerful new way to find and view video content quickly and easily. Now you can allow viewers to search for specific content or speakers within individual videos. With Pulse Video Analytics you can: Set automatic tag and index capabilities so you can search videos by spoken phrase or word, making video content easy to find and navigate Automate vocabulary creation for spoken-word tagging based on a customized list of relevant terms Offer speaker identification so you can quickly locate and view relevant content by who is speaking

Easy Video Management for Many Uses Improve communication and collaboration with the Cisco MXE 3500 (Media Experience Engine) to enable video everywhere in the enterprise. The MXE 3500 extends the reach and usefulness of video for collaboration and communications through a collection of vital media transformation services, along with transparent integration into media processing workflows as video files and live streams are created, transported, and consumed over the network. This opens the door to many uses such as meetings, events, training and education, organizational communications, safety and security, and advertising where video enables faster business decision making, global collaboration, and scaling of expertise. Any-to-Any Media Adaption Services With any to any media adaptation on the MXE 3500, recorded and live video content is automatically adapted from a range of incompatible media formats, resolutions, and speeds, from standard-definition [SD] up to full high-definition [HD], so they can be viewed on demand or live by a wide variety of playback devices and applications, such as Cisco Show and Share. Media Post-Productions The media post-production capabilities of the MXE 3500 offers several unique professional studio-quality video features that can be fully automated and applied to source media files. For example, introductory and trailers videos can be appended the media file, as well as watermarks and graphic overlays to add dynamic multilayered titles, branded graphics, subtitles, captions, and animations directly on top of the video.
