### QUESTION 1

A customer is implementing pcAnywhere and has very strict security guidelines. How can a system administrator help ensure that pcAnywhere is secure and still use all of its features?

- A. select View Only mode
- B. use PID/PPS
- C. block the unsecure ports
- D. use encryption

Correct Answer: D

---

### QUESTION 2

An administrator sets up an inventory to run at 16:00 weekly on Wednesdays, with the setting to throttle inventory reporting evenly over a period of 4 hours. All clients are refreshing their configuration policies every 4 hours. The current time is 08:00 on Tuesday morning. When will the inventory be collected?

- A. Tuesday, within 4 hours of receiving the policy
- B. Wednesday, between 14:00 and 18:00
- C. Wednesday, at 16:00
- D. Wednesday, between 16:00 and 20:00

Correct Answer: D

---

### QUESTION 3

A Deployment Solution administrator needs to re-image an employee's hard disk without losing an important, existing folder. How can the administrator deploy the computer image without erasing the existing folder?

- A. Use a File Preservation task to mark the important folder as one to preserve during imaging.
- B. Deploy an image using the RapidDeploy imaging engine using the File Preservation feature.
- C. Use a PC Transplant task to mark the important folder as one to preserve during imaging.
- D. Deploy an image using the Ghost imaging engine using the File Preservation feature.

Correct Answer: D

---

### QUESTION 4

A healthcare company has several smaller outlying locations with very limited bandwidth to corporate headquarters.

Maintenance of computers in these locations is proving problematic, especially operating system upgrades and deployment. They would like to completely automate the operating system distribution, installation, and configuration for connected PCs in these locations with minimal impact on the WAN. They have selected a Site Server for each location. What must they do to enable re-imaging of managed computers to occur locally in each remote location?

- A. install Task and Package services on the designated site server; enable the Deployment Site server policy, Deployment Plug-in policy, and Automation Folders policy
- B. enable Deployment Site server and Deployment plug-in policies; establish a remote Deployment portal on the site server; configure Package Server image replication
- C. install Package and Deployment site services on the designated site server; enable PXE Configuration policies; enable the Deployment Task Handler policy
- D. enable Deployment PXE service components on the designated site server; create a preboot configuration supporting PXE; enable the Deployment Plug-in policy

Correct Answer: A

---

#### QUESTION 5

Which Patch Management Solution 7.1 policy controls the notification items displayed to the user when software updates are being processed on the endpoint?

- A. the Software Update Plug-in policy
- B. the Default Software Update Plug-in policy
- C. the Default Software Bulletin Plug-in policy
- D. the Default Patch Update Plug-in policy

Correct Answer: B
