### QUESTION 1

Which option is true about use of mocks in a Spring Boot web slice test? (Choose the best answer.)

- A. Mocking a Spring Bean requires annotating it with @MockBean annotation.
- B. If a Spring Bean already exists in the web slice test spring context, it cannot be mocked.
- C. Mocks cannot be used in a Spring Boot web slice test.
- D. Mocking a Spring Bean requires annotating it with @Mock annotation.

Correct Answer: A

### QUESTION 2

Which two statements are true regarding bean creation? (Choose two.)

- A. A Spring bean can be explicitly created by annotating methods or fields by @Autowired.
- B. A Spring bean can be implicitly created by annotating the class with @Component and using the component-scanner to scan its package.
- C. A Spring bean can be implicitly created by annotating the class with @Bean and using the component-scanner to scan its package.
- D. A Spring bean can be explicitly created using @Bean annotated methods within a Spring configuration class.
- E. A Spring bean can be explicitly created by annotating the class with @Autowired.

Correct Answer: BE

### QUESTION 3

Spring puts each bean instance in a scope. What is the default scope? (Choose the best answer.)

- A. prototype
- B. singleton
- C. request
- D. session

Correct Answer: B

Reference: <https://stackoverflow.com/questions/17599216/spring-bean-scopes>

---

#### QUESTION 4

Which statement is true about the @PropertySource annotation? (Choose the best answer.)

- A. Used to designate the location of the application.properties file in a Spring Boot application.
- B. Used to easily look up and return a single property value from some external property file.
- C. Used to designate the file directory of the application.properties file in a Spring Boot application.
- D. Used to add a set of name/value pairs to the Spring Environment from an external source.

Correct Answer: B

---

#### QUESTION 5

Which two statements are true regarding storing user details in Spring Security? (Choose two.)

- A. With a custom UserDetailsService defined in the ApplicationContext, Spring Boot still creates the default user.
- B. Passwords must be hashed and the default hashing algorithm is MD5.
- C. User details can be stored in custom storage and retrieve them by implementing the UserDetailsService interface.
- D. User details can be stored in a database, in LDAP, or in-memory.
- E. The user details includes username and password but not authorities.

Correct Answer: AE
