QUESTION 1

Examine the configuration on R4. The routing table shows no entries for 172.16.10.0/24 and 172.16.20.0/24. Identify which of the following is the issue preventing route entries being installed on R4 routing table?

- A. HSRP issue between R4 and R2
- B. This is an OSPF issue between R4 and R2
- C. This is a DHCP issue between R4 and R2
- D. The distribute-list configured on R4 is blocking route entries
- E. The ACL configured on R4 is blocking inbound traffic on the interface connected to R2

Correct Answer: D

If we look at the configuration on R4 we see that there is a distribute list applied to OSPF, which blocks the 172.16.20.0/24 and 172.16.10.0/24 networks.

QUESTION 3

Refer to the exhibit. The tunnel between R2 and R5 is not coming up. R2, R4 and R5 do not have any routing information sources other than OSPF and no route filtering is implemented anywhere in the network. Which two actions fix the issue?(choose two)

- A. Redistribute connected routes to OSPF on R5
- B. Change the tunnel destination on R2 to 192.168.2.1
- C. Advertise interface lo0 to OSPF on R5
- D. Configure a static route on R5 to 2.2.2.2 via 192.168.2.1
- E. Fix the OSPF adjacency issue between R4 and R5

Correct Answer: AC

In order for the tunnel to be established between R2-R5, the R2 should have a path for the 5.5.5.5/32 route in its own routing table, and because the ospf is the only routing protocol here, so R5 has to advertise the route 5.5.5.5/32, and that is possible through these option: 1 - redistribute connected route to ospf on R5 2 - Advertise interface lo0 to OSPF on R5 For knowing more about the rules for the gre channel to be established, check the link below:
