### QUESTION 1

Which three selections represent implementations of Cisco VN-Link technology? (Choose three.)

- A. Cisco Nexus 1000V
- B. Cisco Nexus 2000 FEX
- C. Cisco VM-FEX
- D. VMware PTS
- E. vMotion

Correct Answer: ACD

The VM is powered on and resides on the ESX Host 1 with all the information stored on the shared storage. The VM was connected to the PODy (where y is the number of your POD) PTS VDS by associating it to port group VLAN61 that was created on the Cisco Nexus 5548 device. The VM has been connected to the vPC system automatically using a VN-Link in the hardware in PTS mode or in VM-FEX mode.

The VEM bits are used in PTS mode to connect the VM VNIC to the VMNIC interface.

In this case, the VMNIC interface is not a real VMNIC but a dynamic VNIC that is presented as an interface to the ESX OS. The dynamic VNIC is enabled when the Cisco UCS VIC creates and configures the VNIC parameters inherited from port group VLAN61.
