QUESTION 1

Which statement about static or default route on the Cisco ASA appliance is true?

- A. The admin distance is 1 by default.
- B. From the show route output, the [120/3] indicates an admin distance of 3.
- C. A default route is specified using the 0.0.0.0 255.255.255.255 address/mask combination.
- D. The tunneled command option is used to enable route tracking.
- E. The interface-name parameter in the route command is an optional parameter if the static route points to the next-hop router IP address.

Correct Answer: A

QUESTION 2

Which statement about Cisco ASA NetFlow v9 (NSEL) is true?

- A. NSEL events match all traffic classes in parallel
- B. NSEL is has a time interval locked at 20 seconds and is not user configurable
- C. NSEL tracks flow-create, flow-teardown, and flow-denied events and generates appropriate NSEL data records
- D. You cannot disable syslog messages that have become redundant because of NSEL
- E. NSEL tracks the flow continuously and provides updates every 10 second
- F. NSEL provides stateless IP flow tracking that exports all record od a specific flow

Correct Answer: C

http://www.cisco.com/c/en/us/td/docs/security/asa/asa82/configuration/guide/config/monitor_nsel.html

Information About NSEL

The ASA supports NetFlow Version 9 services. For more information about NetFlow services, see RFCs.

The ASA implementation of NSEL is a stateful, IP flow tracking method that exports only those records that indicate significant events in a flow. In stateful flow tracking, tracked flows go through a series of state changes. NSEL events are used to export data about flow status, and are triggered by the event that caused the state change.

The significant events that are tracked include flow-create, flow-teardown, and flow-denied (excluding those flows that are denied by EtherType ACLs). Each NSEL record has an event ID and an extended event ID field, which describes the flow event.

The ASA implementation of NSEL provides the following major functions:

- [Configures and enables NSEL on the ASA and exports flow records to the configured NetFlow collectors.](#)
- Defines and exports templates that describe the progression of a flow. Templates describe the format of the data records that are exported through NetFlow. Each event has several record formats or templates associated with it.
- Tracks configured NSEL collectors and delivers templates and data records to these configured NSEL collectors through NetFlow over UDP only.
- Sends template information periodically to NSEL collectors. Collectors receive template definitions, normally before receiving flow records.
- Filters NSEL events based on the traffic and event type through Modular Policy Framework, and then sends records to different collectors. Traffic is matched based on the order in which classes are configured. After a match is found, no other classes are checked. The supported event types are flow-create, flow-denied, flow-teardown, and all. Records can be sent to different collectors. For example, with two collectors, you can do the following:

**QUESTION 3**

A security engineer must evaluate Cisco Security Manager. Which two options are benefits of using Cisco Security Manager to manage security? (Choose two)

- A. Configuration of access control plane policies on multiple Cisco ASA firewalls at once
- B. automatic software upgrades on multiple firewall devices
- C. ability to console into each firewall from centralized management
- D. configuration of ACLs on multiple Cisco VSG firewalls at once
- E. configuraion of IPS signatures on multiple Firepower sensors at once

Correct Answer: BE

QUESTION 4

Which URL matches the regex statement "http"*/"www.cisco.com/"**[^E]"xe"?

- A. <https://www.cisco.com/ftp/ios/tftpserver.exe>
- B. <https://cisco.com/ftp/ios/tftpserver.exe>
- C. <http://www.cisco.com/ftp/ios/tftpserver.Exe>
- D. <https://www.cisco.com/ftp/ios/tftpserver.EXE>

Correct Answer: A

QUESTION 5

About User identity with domain (there is a screen), if user is not in domain, what identity will be?

- A. local
- B. default

Correct Answer: A

ASA Identity Firewal:

The default domain is used for all users and user groups when a domain has not been explicitly configured for those users or groups. When a default domain is not specified, the default domain for users and groups is LOCAL. Additionally, the

Identity Firewall uses the LOCAL domain for all locally defined user groups or locally defined users (users who log in and authenticate by using a VPN or web portal).
