QUESTION 1

Refer to the exhibit.

An engineer is troubleshooting non-802.11 interference and observes the shown output. Which interference signature is depicted?

- A. cordless phone
- B. analog video cameras
- C. microwave oven
- D. FHSS Bluetooth

Correct Answer: B

QUESTION 2

Refer to the exhibit.

An engineer is troubleshooting non-802.11 interference and observes this output. Which type of interference signatures can be identified?

- A. one frequency hopping Bluetooth
- B. two healthy CCK and one malformed OFDM
- C. three broadband jammers
- D. two strong microwave ovens and one moderate

Correct Answer: B

QUESTION 3

In a Cisco OfficeExtend environment, which encryption type is used between the access point and the wireless LAN controller?

- A. DTLS
- B. TLS
- C. STLS
- D. OpenSSL

Correct Answer: A

DTLS data encryption is enabled automatically for OfficeExtend access points but disabled by default for all other access points. Most access points are deployed in a secure network within a company building, so data encryption is not necessary. In contrast, the traffic between an OfficeExtend access point and the controller travels through an unsecure public network, so data encryption is more important for these access points. When data encryption is enabled, traffic is encrypted at the access point before it is sent to the controller and at the controller before it is sent to the client.

QUESTION 4

An engineer is deploying a wireless infrastructure and must use Layer 2 discovery for access point association. Which configuration meets this requirement?

- A. Configure the Access Points and WLC management interface on the same VLAN.
- B. Configure a DNS A RECORD to point to the controller.
- C. Configure option 43 on the APs DHCP scope.
- D. Configure the AP using a serial connection to indicate its controller.

Correct Answer: A

QUESTION 5
