QUESTION 1

An organization is adding four Session Managers installed to its network. The installation scripts for all four session Manager Instances have completed and all services have been started but none have yet been configured with Session Manager. The technician's task is to use System Manager to set up the four Session Managers in an in (n-1)/n redundant arrangement ready for adding users to redundant Session Manager Pairs.

Which sequence best describes the tasks that are to be performed?

- A. Ensure that a Location and SIP Domain suitable for each Session Manager is defined. Add each Session Manager as a SIP Entity. Associate each Session Manager SIP Entity with a Session Manager instance. Set up Entity Links between each Session Manager.
- B. Define each Session Manager as a SIP Entity. Establish relationships between them by defining Routing Policies based on their respective locations. Add appropriate Adaptations to each Session Manager.
- C. Define each Session Manager as a SIP Entity by creating Entity Links. Create Communication Profiles for each Session Manager.
- D. Add each Session Manager as Routing Agents. Establish links between them by adding Locations. Mark each Session Manager as being 'active' or 'standby'.

Correct Answer: A

QUESTION 2

A routing policy administrator needs to create a policy that enables Session Manager to route to different destination based on different conditions. Time of day is one such condition. Which two Parameters may also be used by Session Manager when selecting the applicable routing policy? (Choose two.)

- A. the location of the calling party
- B. the registration state of the destination
- C. the SIP domain of the called party
- D. the origination or termination application sequences that will be applied to call, ignoring what the applications themselves may do

Correct Answer: AC

QUESTION 3

Which three statements about a user's profile are correct? (Choose three.)

- A. Branch Session Manager (BSM) association is set in the Session Manager Profile under the user's Communication Profile. If a primary Session Manager has been selected then assigning a BSM mandatory.

- B. Using the Endpoint Profile a user can be assigned a station on a Communication Manager that SMGR knows about.
- C. The difference between the '\\SMGR Login Password\\' and the '\\Shared Communication Profile Password' is that one allows the user to login to the SMGR web interface and the other allows them to authenticate at a device.
- D. A user may be assigned exactly one role. That single role can allow access to multiple resource types.
- E. User identity authentication (password checking) can be achieved by first configuring SMGR to communicate with an LDAP server and then choosing the profile '\\Authentication Type\\' as '\\Enterprise\\'.

Correct Answer: BCE

QUESTION 4

The Data Replication Service replicates data from the master database to local copies of the database on each Session Manager instance. It is important that the master and local database are synchronized.

How would an administrator check that the databases are synchronized?

- A. Run initDRS
- B. View the Session Manager Security Module status.
- C. Execute the '\\Test Postgres database sanity\\' maintenance test
- D. Check the status of the Replica Group

Correct Answer: C

QUESTION 5

If two standalone session Managers and one standalone System Manager are going to be installed, how many IP Addresses will you need?

- A. 3
- B. 5
- C. 6
- D. 7
- E. 9

Correct Answer: D
