### QUESTION 2

Which OSPF LSA is used to support MPLS Traffic-Engineering?

- A. NSSA LSA (Type 7)
- B. Opaque LSA (Type 11)
- C. Opaque LSA (Type 9)
- D. Opaque LSA (Type 10)
- E. External LSA (Type 5)

Correct Answer: D

Type 10 - an area-local "opaque" LSA as defined by RFC2370. Opaque LSAs contain information which should be flooded by other routers even if the router is not able to understand the extended information itself. Typically type 10 LSAs are used for traffic engineering extensions to OSPF, flooding extra information about links beyond just their metric, such as link bandwidth and color.

### QUESTION 3

Which type of AAL does ATM utilize to deliver CBR traffic?

- A. AAL2
- B. AAL4
- C. AAL5
- D. AAL1
- E. AAL3

Correct Answer: D

An ATM Adaptation layer 1 or AAL1 is used for transmitting Class A traffic, that is, real-time, constant bit rate, connection oriented traffic (example- uncompressed audio and video). Bits are fed in by the application at constant rate and must be delivered to other end with minimum delay, jitter or overhead. The input is stream of bits without message boundaries. For this traffic, error detection protocols cannot be used since timeouts and retransmission causes delay but the missing cells are reported to the application, that must take its own action to recover from them.
