QUESTION 1

To support efficient bandwidth utilization for broadcasting multicast packets to all WLANs on the AP, which two mechanisms can you configure on the Cisco WLCs? (Choose two.)

A. VideoStream can be used to convert multicast transmissions to broadcast transmissions at the AP, to enable the AP to receive ACKs from the clients and to determine the frames that need to be retransmitted.

B. VideoStream can be used to convert multicast transmissions to unicast transmissions at the AP. The same data rate will be used, but the unicast stream allows the AP to receive ACKs from the clients and to determine the frames that need to be retransmitted.

C. RRC in a Cisco WLC will use channel utilization as a metric to determine capacity and perform admission control, but it does not deny requests that would cause oversubscription.

D. RRC in a Cisco WLC will use channel utilization as a metric to determine capacity and perform admission control, and it denies requests that would cause oversubscription by sending SAP messages to clients on drop.

E. VideoStream can be used to convert multicast transmission to unicast transmission at the AP. Because of the unreliable nature of wireless media, no ACKs are expected from the clients; however, unicast transmission will effectively reduce multicast PLR to between 0.1 and 0.5 percent.

F. VideoStream can be used to convert multicast transmission to unicast transmission at the AP, to enable the AP to receive ACKs from the clients and to determine the frames that need to be retransmitted.

Correct Answer: DF

QUESTION 2

Refer to the exhibit.

```
Router#show ip igmp groups

IGMP Connected Group Membership
Group Address      Interface            Uptime     Expires    Last Reporter
239.5.5.5          Ethernet0/0          00:05:14   00:02:14   10.10.10.9
224.0.1.39         Ethernet1/0          00:09:11   00:02:08   172.31.100.1
```

Which two statements are true? (Choose two.)

A. 10.10.10.9 is the IP address of the multicast source.

B. 10.10.10.9 is the IP address of the multicast receiver.

C. 10.10.10.9 is the RP address for multicast group 239.5.5.5.

D. The Ethernet 0/0 interface of the router and 10.10.10.9 are in the same broadcast domain.

E. The Ethernet 0/0 interface of the router and 10.10.10.9 do not need to be in the same broadcast domain.

Correct Answer: BD

QUESTION 3

Which three of these options are variables used within the TPC algorithm to determine the transmit power? (Choose three.)

A. antenna gain (dBi)

B. antenna gain (dBm)

C. RSSI of third highest neighbor above the threshold

D. SNR of third highest neighbor above the threshold

E. Tx power control threshold

F. client SNR cutoff value

G. number of neighbors

H. Tx Max

Correct Answer: CEH

QUESTION 4

When is the Poor Link SNR Alarm generated in a mesh network?

A. when the SNR between the mesh nodes falls below 15 dB.

B. when the SNR between the client and the AP falls below 20 dB.

C. when the SNR between the mesh nodes falls below 12 dB.

D. when the Cisco WCS receives the first 10 SNR links from the network.

Correct Answer: C

QUESTION 5

When conducting a greenfield RF site survey with multiple APs, which information element should be enabled to ensure your site survey software will display the hostname of each AP?

A. IE 0

B. IE 1

C. IE 133

D. IE 221

Correct Answer: C

Try our product !

100% Guaranteed Success
100% Money Back Guarantee
365 Days Free Update
Instant Download After Purchase
24x7 Customer Support
Average 99.9% Success Rate
More than 800,000 Satisfied Customers Worldwide
Multi-Platform capabilities - Windows, Mac, Android, iPhone, iPod, iPad, Kindle

We provide exam PDF and VCE of Cisco, Microsoft, IBM, CompTIA, Oracle and other IT Certifications.
