-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

Which two statements about Cisco Nexus 1000V Series Switches are correct? (Choose two.)

- A. When VSM interfaces are created for a virtual machine, the VMware vSwitch port-group configuration is used initially, which requires the creation of a port-group name for these interfaces and an appropriate VLAN. The simplest configuration is to create a single port group (for example, VSM-Interfaces), that includes all the interfaces that use this port group and the same VLAN.
- B. The mgmt0 interface on the VSM does not necessarily require its own VLAN. In fact, you can use the same VLAN to which the VMware vCenter Server belongs. The VSM management VLAN is really no different from any other virtual machine data VLAN. Alternatively, network administrators can designate a special VLAN for network device management.
- C. Always deploy the Cisco Nexus 1000V Series VSM in pairs, with one VSM that is defined as the primary module and the other that is defined as the secondary module on two separate hosts.
- D. The service console is a critical interface that resides on every logical server.

Correct Answer: BC

---

**QUESTION 2**

What is the correct order for FIP virtual establishment?

- A. VLAN discovery, FCF discovery, FLOGI and FDISC, FC command
- B. FCF discovery, VLAN discovery, FLOGI and FDISC, FC command
- C. VLAN discovery, FCF discovery, FLOGI and FDISC
- D. FCF discovery, solicitation and advertisement, FLOGI and FDISC, FC command

Correct Answer: A

---

**QUESTION 3**

When configuring vPC-HM CDP with multiple links to the same switch, are port-channels required?

- A. Each link between the upstream switch and the VEM is an individual subgroup.
- B. Connections that go to the same upstream switch must be configured with the command channel-group mode active.
- C. Connections that go to the same upstream switch must be configured with the command channel-group mode passive.
- D. With vPC-HM CDP, the user can pin traffic from a specific VM to a specific uplink.
- E. Connections that go to the same upstream switch must be configured with the command channel-group mode on.

Correct Answer: E

#### QUESTION 4

Which two statements about a "Virtual PortChannel graceful consistent check" are true?

- A. Graceful consistency check is enabled by default.
- B. When graceful consistency check is enabled, only the links on the secondary peer device are suspended.
- C. Graceful consistency check is disabled by default, so to enable this feature, use graceful consistency-check command under VPC domain configuration mode.
- D. When graceful consistency check is enabled, only the inconsistent VLANs on the secondary peer device are suspended.

Correct Answer: AB

#### QUESTION 5

A Host connected to an NPV switch is not able to see the storage connected to the core switch. Given the output of the show command below, what is the reason of this issue?

```
switch# show npv status
```

```
npiv is enabled
```

External Interfaces:

=====

InterfacE. fc1/1, VSAN: 1, FCID. 0x000000, StatE. Other

Number of External Interfaces: 4

- A. NPV is not enabled on the core switch?
- B. The interface connected to the Core switch is in admin down state
- C. The local host interface belongs to the wrong VSAN?
- D. The local host interface is not able to login

Correct Answer: B
