QUESTION 1

The security team has mandated that all new virtual machines undergo an automated network security scan when provisioned. The security team has provided the cloud architect with the REST API calls necessary to interface with the security scanning solution.

Which design recommendation would enable this capability?

- A. Create an Orchestrator workflow to trigger the security scan based on a subscription to the BuildComplete lifecycle state.
- B. Design an approval policy that references the external REST API and associate this approval policy with the IaaS machine provisioning workflow.
- C. Design a software component that includes the REST API calls during the Install script, and include this component on all systems.
- D. Create an Orchestrator workflow to trigger the security scan based on a subscription to the MachineActivated lifecycle state.

Correct Answer: E

QUESTION 2

The architect for a digital transformation initiative has decided that, given the current characteristics of the company, he is going to implement a medium size deployment of vRealize Automation.

Which three types of components are required for this size deployment? (Choose three.)

- A. Infrastructure IaaS load balancer
- B. vRealize Automation appliance
- C. vRealize Orchestrator appliance
- D. MSSQL failover cluster instance
- E. vRealize Automation appliance load balancer

Correct Answer: ADE

QUESTION 3

An architect for a vRealize Automation (vRA) deployment project has met with the IT team and gathered the following requirements:

1. Automated 30-day power off and archive

2.

99.99% SLA of the custom portal

3.

Utilize built-in functionality

4.

Microsegmentation

5.

API calls to vRA and NSX

6.

Custom Portal

To which infrastructure quality does the 'Microsegmentation' technical requirement map?

A. Performance

B. Security

C. Manageability

D. Availability

E. Recoverability

Correct Answer: B

QUESTION 4

The lead architect for a teaching hospital in Seattle is planning the deployment of a highly-distributed Cloud Management Platform based on VMware vRealize Automation. The design must include log aggregation and analytics for in-depth

troubleshooting and analysis when issues arise and ensure a seamless experience for the operations teams.

The organization must use vRealize Log Insight for log aggregation and analysis.

The organization currently uses vRealize Operations for monitoring, alerting and capacity management.

The design will use external vRealize Orchestrator Appliances.

Match the actions to the components. Some of the components may be associated with more than one action.

Select and Place:

Configure vRealize Log Insight Linux Agent	Answer Area	vRealize Automation IaaS Servers	vRealize Log Insight
Install vRealize Automation Content Pack			
Install vRealize Automation Management Pack			
Configure vRealize Automation Management Pack		vRealize Automation Appliances	vRealize Operatons Manager
Install vRealize Log Insight Windows Agent			
Configure vRealize Log Insight Windows Agent			
Enable Launch-in-Context			

Correct Answer:

Configure vRealize Log Insight Linux Agent	Answer Area	vRealize Automation IaaS Servers	vRealize Log Insight
Install vRealize Automation Content Pack		Install vRealize Log Insight Windows Agent	Configure vRealize Log Insight Linux Agent
Install vRealize Automation Management Pack		Install vRealize Automation Content Pack	Configure vRealize Log Insight Windows Agent
Configure vRealize Automation Management Pack		vRealize Automation Appliances	vRealize Operatons Manager
Install vRealize Log Insight Windows Agent		Install vRealize Automation Content Pack	Install vRealize Automation Management Pack
Configure vRealize Log Insight Windows Agent			Configure vRealize Automation Management Pack
Enable Launch-in-Context			

QUESTION 5

Which design would allow for an infrastructure team to authorize all snapshots taken by vRealize Automation users?

- Design an approval policy for the Policy Type: Service Catalog - Resource Action Request - Create Snapshot - Virtual Machine.
- Ensure that the Approval Required = Any and that it is assigned to the infrastructure team.
- Design a custom XaaS workflow and add it to the provisioning blueprint.
- Configure the XaaS workflow to notify the infrastructure team on any 'Create Snapshot - Virtual Machine' request. The workflow waits for user input prior to running the Create Snapshot workflow.
- Design an Event Broker subscription that triggers on a 'Create Snapshot - Virtual Machine' event type.
- Configure the Event Broker workflow to send an email to the infrastructure team for notification before running a Create Snapshot workflow.
- Design an approval policy for the Policy Type: Service Catalog - Catalog Item Requests - Create Snapshot - Virtual Machine.
- Ensure that the Approval Required = All and that it is assigned to the infrastructure team.

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: A
