QUESTION 1

In Cisco Wireless LAN Controller .the transmit power level of an AP radio is assigned an integer value inserted of a value in mW or dBm. Which two statements about the power level are true (Choose two)

- A. The integer corresponds to a power level that varies depending on the regulatory domain in which the access points are deployed
- B. Each successive lower power level always represents 50% of the previous power level.
- C. Power Level 1 is always the minimum power level allowed per country code setting.
- D. There are always eight power levels for configuration.

Correct Answer: AB

QUESTION 2

Refer to exhibit. The dynamic interfaces shown above are bound to an interface group for a specific WLAN profile in the Cisco Wireless LAN Controller. You notice duplicated multicast streams on the wireless medium for the given WLAN profile. Which statement is correct?

```
(Cisco Controller) >show network multicast mgid summary
Layer2 MGID Mapping:
-----

239.0.1.2              102           12351         IGMP
239.0.1.2              103           12352         IGMP
239.0.1.2              104           12353         IGMP
```

- A. The controller always uses Layer 3 multicast group ID for all Layer 3 multicast traffic sent to the access point. Internet

Group Management Protocol snooping should be disabled to avoid duplicate streams.

B. The controller creates different multicast group IDs for each multicast address and VLAN, and as a result, the upstream router sends one copy for each VLAN. Enable Multicast VLAN to avoid duplicate streams.

C. Global multicast mode and Internet Group Management Protocol snooping have not been enabled. To avoid duplicate streams, enable both.

D. Global multicast mode, global IPv6 config, and multicast listener discovery snooping have not been enabled. Enable these to avoid duplicate streams.

Correct Answer: A

QUESTION 3

You have an AP group called APGroup-1, which has an RF profile called Profile-A associated to its 802.11a band. Which two steps can be used to modify the data rates of the RF profile? (Choose two.)

A. Disable the 802.11a radios of the APs in the AP group and then modify the data rates of the RF profile.

B. Disable the 802.11a band globally on the controller and then modify the data rates on the RF profile.

C. Remove the RF profile from the AP group, modify the data rates and then apply it back to the AP group.

D. Disable the 802.11a band globally of the RF group leader for 802.11a and then modify the data rates on the RF profile.

E. Freeze TPC for the 802.11a band and then change the data rates.

Correct Answer: AC

QUESTION 5

You have been asked to deploy locally significant certificates on access points to implement AP authorization. Which two requirements are needed to authorize Aps using LSC? (Choose two.)

- A. You must deploy 802.1x on all the switch ports that the access points connect through.
- B. The company needs a PKI infrastructure to implement this solution.
- C. A DHCP option must be configured to point the wireless client toward the certificate authority.
- D. A DHCP option must be configured to point the AP toward the certificate authority.
- E. The controller must be configured as a CA proxy and receives the certRequest signed by the CA for the access point.
