Correct Answer: C

QUESTION 3

What are the two categories of variables that you can configure in Object Management?

A. System Default Variables and FireSIGHT-Specific Variables

B. System Default Variables and Procedural Variables

C. Default Variables and Custom Variables

D. Policy-Specific Variables and Procedural Variables

Correct Answer: C

QUESTION 4

Suppose an administrator is configuring an IPS policy and attempts to enable intrusion rules that require the operation of the TCP stream preprocessor, but the TCP stream preprocessor is turned off. Which statement is true in this situation?

A. The administrator can save the IPS policy with the TCP stream preprocessor turned off, but the rules requiring its

operation will not function properly.

B. When the administrator enables the rules and then attempts to save the IPS policy, the administrator will be prompted to accept that the TCP stream preprocessor will be turned on for the IPS policy.

C. The administrator will be prevented from changing the rule state of the rules that require the TCP stream preprocessor until the TCP stream preprocessor is enabled.

D. When the administrator enables the rules and then attempts to save the IPS policy, the administrator will be prompted to accept that the rules that require the TCP stream preprocessor will be turned off for the IPS policy.

Correct Answer: B

QUESTION 5

Access control policy rules can be configured to block based on the conditions that you specify in each rule. Which behavior block response do you use if you want to deny and reset the connection of HTTP traffic that meets the conditions of the access control rule?

A. interactive block with reset

B. interactive block

C. block

D. block with reset

Correct Answer: D
