-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

Refer to the exhibit.

Which action allows you to view a summary count by alarm types for the displayed total of 11 alarms?

- A. Choose Monitor > Alarms
- B. Click the Security tab
- C. Click a respective number in the Alarm Summary
- D. Click the Alarm Summary blue arrow
- E. Choose Home (house icon) > Alarm Summary

Correct Answer: D

When WCS receives an alarm message from a controller, it displays an alarm indicator at the top of the WCS window (see Figure 2-11).

Note: The Administration > Settings > Alarms page has a Hide Acknowledged Alarms check box. You must unselect it if you want acknowledged alarms to appear in the WCS Alarm Summary and alarms lists page. By default, acknowledged alarms are not shown.

Critical (red), Major (orange) and Minor (yellow) alarms appear in the alarm dashboard, left to right. Figure 2-11 WCS Alarm Summary

Alarms indicate the current fault or state of an element that needs attention, and they are usually generated by one or more events. The alarm can be cleared but the event remains.

QUESTION 2

Which statement describes spread spectrum technology in wireless communications?

- A. Signal is spread across optical pulses.
- B. Signal is spread across variations of amplitudes.
- C. Signal is spread across one frequency.
- D. Signal is spread across a whole band of frequencies.

Correct Answer: D

spread-spectrum techniques are methods by which a signal with a particular bandwidth is deliberately spread in the frequency domain, resulting in a signal with a wider bandwidth. Spread spectrum generally makes use of a sequential noise-like signal structure to spread the normally narrowband information signal over a relatively wideband (radio) band of frequencies.

QUESTION 3

In what WCS menu would an engineer locate the WCS software version?

- A. Administration > Settings
- B. Help > About Cisco WCS
- C. Help > Online Help
- D. Administration > License Center

Correct Answer: B

QUESTION 4

Refer to the exhibit.

At which point in the network topology must the trunk be configured to support multiple SSIDs for voice and data separation?

- A. A
- B. B
- C. C
- D. D

Correct Answer: D

Controllers typically map WLANs to VLANs. When configuring a switch port to a controller, you would set the port to support 802.1Q (switchport trunk encapsulation dot1q), then set the port to trunk (switchport mode trunk) and only allow the VLANs needed by the controller (for example, switchport trunk allowed VLANs 10,20,30 if your controller needs only VLANs 10, 20, and 30).

QUESTION 5

DRAG DROP

Drag the description from the left and drop it on the name of the wireless LAN controller interface that it describes on the right.

Select and Place:

Always available. Controls intercontroller communications.	AP manager interface
Not always required for configuratoin. IP source address of CAPWAP tunnels.	management interface
Always available. Used for DHCP relay.	virtual
Not always required for configuration. Require static routes.	dynamic interface
Not always required for configuration. Known as the VLAN interface.	service interface

Correct Answer:

	Not always required for configuratoin. IP source address of CAPWAP tunnels.
	Always available. Controls intercontroller communications.
	Always available. Used for DHCP relay.
	Not always required for configuration. Known as the VLAN interface.
	Not always required for configuration. Require static routes.
