QUESTION 1

Your company has a private cloud that contains a System Center 2012 R2 infrastructure.

You have a server named Server1 that runs Windows Server 2012 R2. Server1 hosts a Java-based application.

You need to ensure that you can monitor exceptions generated by the application.

Which three actions should you perform? Each correct answer presents part of the solution.

- A. Deploy the Java Application Performance Monitoring agent to Server1.
- B. Import the Management Pack for Java Application Performance Monitoring (APM).
- C. Deploy JavaBeans to Server1.
- D. Import the Management Pack for Java Enterprise Edition (JEE).
- E. Deploy JavaBeans to the Operations Manager server.

Correct Answer: ABD

QUESTION 2

Your company has a private cloud that is managed by using a System Center 2012 infrastructure. The network contains an Operations Manager infrastructure and a Virtual Machine Manager (VMM) infrastructure.

You implement a Microsoft SharePoint Server 2010 farm that is hosted on 10 virtual machines.

The company defines a service level agreement (SLA) for the farm's availability of at least 99.9 percent uptime.

You need to ensure that the company's compliance officer can identify whether the SLA requirement is met.

What should you do?

- A. Create a group, and then add all of the farm servers to the group. Create a Service Level Tracking object. Add a service level objective (SLO), and then set the goal to 99.9 percent.
- B. Create a group, and then add all of the farm servers to the group. Create a performance collection rule for each front-end Web server in the farm. Configure an alert if network availability falls below 99.9 percent.
- C. Create a distributed application that contains the servers and the services used by the farm. Create a Service Level Tracking object for the distributed application. Add a service level objective (SLO), and then set the goal to 99.9 percent.
- D. Create a distributed application that contains the servers and the services used by the farm. Create a performance collection rule for each front-end Web server in the farm. Configure an alert if network availability falls below 99.9 percent.

Correct Answer: C

QUESTION 3

You need to install the new version of App1.

What should you do first? (More than one answer choice may achieve the goal. Select the BEST answer.)

- A. Add the new version of App1 to a copy of the existing service template.
- B. From Configuration Manager, create a new deployment type for the new version of App1.
- C. Add the new version of App1 to a new blank service template.
- D. From a Group Policy, deploy the new version of App1.

Correct Answer: A

QUESTION 4

Your company has a private cloud that contains a System Center 2012 R2 infrastructure. You run applications virtually by using Hyper-V hosts. Each application has a dedicated virtual machine on a Hyper-V host.

The Microsoft Monitoring Agent is deployed to all physical servers. Currently, all of the physical servers are monitored for memory, CPU, and disk space use.

You need to monitor the memory, CPU, and disk space use of each application server.

What should you do?

- A. Deploy the Microsoft Monitoring Agent to each virtual machine.
- B. Configure a new notification subscription for each Hyper-V host.
- C. Deploy the Configuration Manager client to each virtual machine.
- D. Configure a new channel for each virtual machine.

Correct Answer: A

Bad question IMO. The thing to know here is that the SCOM Agent is now called the Microsoft Monitoring Agent. In order to monitor VMs, you need to install the SCOM agent (MMA) to the guest, not the host.

None of the other answers make sense anyways.

Please see <http://www.server-log.com/blog/2013/12/2/installing-scom-agent-microsoft-monitoring-agent-fromsystem.html>

QUESTION 5

You need to identify the information that is required to discover each switch by using an explicit discovery.

Which information do you require for each switch? (Each correct answer presents part of the solution. Choose all that

apply.)

- A. The IP address
- B. The MAC address
- C. The management credentials
- D. The SNMP community string

Correct Answer: AC
