QUESTION 1

You are troubleshooting the problems with viewing scanned contracts.

You need to select the appropriate Performance Monitor counters to use.

Which performance counters should you use? (To answer, drag the appropriate counters to the correct location or locations in the answer area.)

Each counter may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Select and Place:

Answer Area	
Purpose	Performance Monitor counter
Monitor how full the cache is	
Monitor the removal of cache contents	

Blob Cache fill ratio
Blob cache flushes/second
Disk Cache fill ratio
Total number of cache compactions
Total objects in Blob Cache

Correct Answer:

Answer Area	
Purpose	Performance Monitor counter
Monitor how full the cache is	Blob Cache fill ratio
Monitor the removal of cache contents	Total number of cache compactions

Blob cache flushes/second
Disk Cache fill ratio
Total objects in Blob Cache

Note:

* From scenario:

Scanned contracts are stored in binary large object (BLOB) cache storage. The BLOB cache is routinely filling up. End users are reporting poor performance when

viewing scanned contracts.

* Symptoms: The Blob Cache fill ratio performance counter threshold has been exceeded. Cause: The configured size for the disk-based cache is smaller than the

total size of frequently accessed files for the Web application.

* Total Number of cache Compactions:

If this number is continually or frequently high, the cache size is too small for the data being requested. To improve performance, increase the size of the cache.

Reference: Monitor cache performance in SharePoint 2013

QUESTION 2

You have a SharePoint Server 2013 server farm.

You need to ensure that users can use the Newsfeed app on their My Site to aggregate user actions and system activities.

Which type of cache should you configure?

- A. An output cache
- B. An object cache
- C. A BLOB cache
- D. A distributed cache

Correct Answer: D

SharePoint 2013, makes use of distributed cache to cache newsfeeds, microblogging, conversations, security trimming, OneNote client access, and even keeps the FedAuth cookie for claims based authentication on the server side, so it's more secure, load balancer friendly, and works with webkit-based browsers that like to chop off your cookies at 64kb.

QUESTION 3

You need to prepare the web servers for a SharePoint installation in the new farm.

Which three actions should you perform? (Each correct answer presents part of the solution. Choose three.)

- A. Save the PrerequisiteInstaller.Arguments file in the same directory as the prerequisite installer.
- B. Define the installation arguments in a file named PrerequisiteInstaller.Arguments.txt

- C. Install Windows Server 2012 on SERVER02.
- D. Define the installation arguments in a file named PrerequisiteInstaller.Arguments.cfg.
- E. Save the PrerequisiteInstaller.Arguments file in the SharePoint installation directory.
- F. Install Windows Server 2012 on a virtual machine.

Correct Answer: ABF

A, B: Using a text editor, create a new text document named PrerequisiteInstaller.Arguments.txt. Save this file to the same location as PrerequisiteInstaller.exe.

F: From Scenario: All servers must be virtualized unless otherwise specified Note: From scenario (but applies to the database server, not the web servers): The database servers must be physical machines running Windows Server 2012 with direct access to storage. Reference: Install prerequisites for SharePoint 2013 from a network share

QUESTION 4

DRAG DROP

A company develops several SharePoint apps.

App developers must be able to make the apps available to all users across the company by using a corporate app catalog.

You need to set up the corporate app catalog.

Which five actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

- From App Management, select **Manage App Catalog**.
- Select **Configure App URLs**.
- In Central Administration, select **Apps**.
- Select the web application, and select **View site settings**.
- Select **Autohosting** for the host type, and select **OK**.
- Select **Site Permissions**, and then **Grant Permissions**.
- Specify the CNAME record of the app catalog, and select **OK**.
- In the **Share App Catalog Site** dialog box, specify users and their permissions, and select **Share**.

Correct Answer:

The screenshot shows a sequence of steps for configuring an app catalog in SharePoint. The steps are presented in a vertical list on the left, with corresponding actions in a vertical list on the right. A large green watermark 'www.Pass4Lead.com' is overlaid diagonally across the center. Two circular arrows, one pointing right and one pointing left, are positioned between the two columns of text.

Select **Configure App URLs**.

Select **Autohosting** for the host type, and select **OK**.

Specify the CNAME record of the app catalog, and select **OK**.

In Central Administration, select **Apps**.

From App Management, select **Manage App Catalog**.

Select the web application, and select **View site settings**.

Select **Site Permissions**, and then **Grant Permissions**.

In the **Share App Catalog Site** dialog box, specify users and their permissions, and select **Share**.

QUESTION 5

A company plans to migrate a custom task tracking solution to SharePoint Online. The solution includes customized master pages, timer jobs, and content by query web parts.

You need to migrate the solution to SharePoint Online and maintain long-term support for the solution.

What should you do?

- A. Set all content by query web parts to use unthrottled requests.
- B. Replace all content by query web parts with content search web parts.
- C. Re-write the solution as a sandboxed solution.
- D. Re-write the solution as an app.

Correct Answer: C
