QUESTION 3

Your company has an Exchange Server 2016 organization. The organization has a four-node database availability group (DAG) that spans two data centers. Each data center is configured as a separate Active Directory site. The data centers

connect to each other by using a high-speed WAN link. Each data center connects directly to the Internet and has a scoped Send connector configured.

The company's public DNS zone contains one MX record.

You need to ensure that if an Internet link becomes unavailable in one data center, email messages destined to external recipients can be routed through the other data center.

What should you do?

- A. Create a Receive connector in each data center.
- B. Clear the Proxy through Client Access server check box.
- C. Clear the Scoped Send Connector check box.
- D. Create an MX record in the internal DNS zone.

Correct Answer: C

QUESTION 4

You plan to deploy a data availability group (DAG) across two locations. You will use a Microsoft Azure virtual machine as a witness server.

You need to configure the network infrastructure to support the planned deployment.
