QUESTION 1

A site collection includes a subsite that has the following characteristics: The subsite does not appear in the navigation structure for the site collection. It does not appear in the end user recycle bin or the site collection recycle bin. It was last accessed two months ago.

You need to restore the subsite without overwriting any other content in the site collection.

Which five actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

	Answer Area
Perform an export operation to extract the deleted subsite from the restored content database.	
Perform a site collection backup operation to extract the subsite from the restored content database.	
Sign in to Central Administration and attach the restored content database to the web application that hosts the site collection.	
Retrieve the two-month-old Microsoft SQL Server backup of the content database containing the site collection.	
Import the extracted subsite into the original site collection.	
Sign in to Central Administration and initiate a granular backup to recover data from an unattached content database.	
Restore the database backup to a Microsoft SQL Server instance accessible by the SharePoint farm.	

Correct Answer:

	Answer Area
	Retrieve the two-month-old Microsoft SQL Server backup of the content database containing the site collection.
Perform a site collection backup operation to extract the subsite from the restored content database.	Restore the database backup to a Microsoft SQL Server instance accessible by the SharePoint farm.
Sign in to Central Administration and attach the restored content database to the web application that hosts the site collection.	Sign in to Central Administration and initiate a granular backup to recover data from an unattached content database.
	Perform an export operation to extract the deleted subsite from the restored content database.
	Import the extracted subsite into the original site collection.

QUESTION 2

You need to specify hardware and software requirements for web servers used by the SharePoint environment.

Which two minimum requirements should you specify? (Each correct answer presents part of the solution Choose two.)

A. Virtual machine running Windows Server 2012

B. 4-core virtual machine

C. 6-core virtual machine

D. Physical host running Windows Server 2008 R2

E. Physical host running Windows Server 2012

F. Virtual machine running Windows Server 2008 R2

Correct Answer: BF

QUESTION 3

You are managing a SharePoint farm in an Active Directory Domain Services (AD DS) domain.

You need to configure a service account to use domain credentials.

What should you do first?

A. Configure the service account to use a domain user account.

B. Register the domain credentials in the Farm Administrators group.

C. Configure the service account to use a local user account.

D. Register the domain credentials as a SharePoint managed account.

Correct Answer: D

QUESTION 4

You plan to deploy SharePoint Server 2013 to your enterprise organization\\\'s multi-farm configuration.

A dedicated enterprise services farm will be created to host shared service applications.

Two collaboration farms will be created to host collaboration sites.

All users must be able to perform the following tasks:

Aggregate tasks from different site collections.

Automatically translate pages to different languages.

Classify documents by using an enterprise taxonomy.

View Microsoft Excel files rendered in the web browser of the users.

You need to identify which service applications to deploy to each farm.

What should you identify? (To answer, drag the appropriate service applications to the correct farms. Each service application may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Select and Place:

Service Applications	Answer Area	
Excel Services Application	Enterprise farm:	Service application
Machine Translation Service		Service application
Managed Metadata Service	Collaboration farm:	Service application
Work Management Service		Service application

Correct Answer:

Service Applications	Answer Area	
	Enterprise farm:	Machine Translation Service
		Managed Metadata Service
	Collaboration farm:	Excel Services Application
		Work Management Service

QUESTION 5

You are managing a SharePoint farm.

Diagnostic logs are rapidly consuming disk space.

You need to minimize the amount of log data written to the disk.

Which two actions should you perform? (Each correct answer presents part of the solution.

Choose two.)

A. Set the log event level to Information.

B. Set the log event level to Verbose.

C. Set the log trace level to Medium.

D. Set the log trace level to Verbose.

E. Set the log event level to Warning.

F. Set the log trace level to Monitorable.

Correct Answer: EF

Explanation: E: Event Levels Warning, Level ID 50 Information, Level ID: 80 Verbose, Level ID: 100

F: Trace levels: Monitorable: 15 Medium: 50 Verbose: 100

Note: When using the Unified Logging System (ULS) APIs to define events or trace logs, one of the values you must supply is the ULS level. Levels are settings that indicate the severity of an event or trace and are also used for throttling, to prevent repetitive information from flooding the log files.

Reference: Trace and Event Log Severity Levels
