QUESTION 1

Your network contains an Active Directory domain named contoso.com. All domain controllers run Windows Server 2012 R2. The forest functional level is Windows Server 2012.

Your company plans to deploy an application that will provide a search interface to users in the company. The application will query the global catalog for the Employee-Number attribute.

You need to recommend a solution to ensure that the application can retrieve the Employee-Number value from the global catalog.

What should you include in the recommendation?

A. the Dsmod command

B. the Set-User cmdlet

C. the Enable-ADOptionalFeature cmdlet

D. the Set-AdObject cmdlet

E. the Ldifde command

Correct Answer: D

QUESTION 2

Your network contains a server named Server1 that runs Windows Server 2012. Server1 has the Network Policy Server server role installed.

You configure Server1 as part of a Network Access Protection (NAP) solution that uses the 802.lx enforcement method,

You add a new switch to the network and you configure the switch to use 802.lx authentication.

You need to ensure that only compliant client computers can access network resources through the new switch.

What should you do on Server1?

A. Add the IP address of each new switch to a remediation server group.

B. Add the IP address of each new switch to the list of RADIUS clients.

C. Add the IP address of each new switch to a connection request policy as an Access Client IPv4 Address.

D. Add the IP address of each new switch to a remote RADIUS server group.

Correct Answer: B

802.1X and RADIUS-compliant APs (Acess Points), when they are deployed in a RADIUS infrastructure with a RADIUS server such as an NPS server, are called RADIUS clients.

QUESTION 3

You work for a company named ABC.com. Your role of Network Administrator includes the management of the company\\'s Windows 2012 Active Directory Domain Services (AD DS) domain. You are configuring an IP Address Management

(IPAM) server in the network. The IPAM server will be used to manage the DHCP and DNS servers in the network. A user named Myles works in the IT department. Myles will help in the administration of the IPAM server.

You need to assign Myles the appropriate permissions on the IPAM server. Company security policy states that all users must be assigned the minimum permissions necessary to perform their required tasks.

Which IPAM security group has the minimum permissions to create an IP Address Block?

A. IPAM Users

B. IPAM multi-server management (MSM) administrators

C. IPAM address space management (ASM) administrators

D. IPAM IP Audit Administrators

E. IPAM Administrators

Correct Answer: C

QUESTION 4

DRAG DROP Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2012. Server1 resides in the perimeter network and has the Remote Access server role installed.
Some users have laptop computers that run Windows 7 and are joined to the domain. Some users work from home by using their home computers. The home computers run either Windows XP, Windows Vista/ Windows 7, or Windows 8.

You need to configure the computers for remote access.

Which three actions should you perform?

To answer, move the three appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Publish the connection files to a web site in the company's extranet.	
Publish a software deployment package by using a Group Policy object (GPO).	
Create a RemoteApp application package.	
Create a Connection Manager Administration Kit (CMAK) package.	
Install the Connection Manager Administration Kit (CMAK).	

Correct Answer:

Actions	Answer Area
	Install the Connection Manager Administration Kit (CMAK).
Publish a software deployment package by using a Group Policy object (GPO).	Create a Connection Manager Administration Kit (CMAK) package.
Create a RemoteApp application package.	Publish the connection files to a web site in the company's extranet.

*

Installing CMAK

CMAK is an optional component that is not installed by default. You must install CMAK to create connection profiles that your users can install to access remote networks.

*

The Connection Manager Administration Kit (CMAK) is a tool that you can use to customize the remote connection experience for users on your network by creating predefined connections to remote servers and networks. To create and customize a connection for your users, you use the CMAK wizard.

*

Distributing your completed connection profile

Running the CMAK wizard produces a connection profile that is stored in an executable file. Running that file on a client computer equips that computer with everything needed to establish the network connection that you designed.

QUESTION 5

One of the technical requirements states that DHCP IP address leases must be logged centrally.

Which of the following solutions can be used for logging the IP address leases and the name of the user the IP address was leased to?

A. DHCP audit logging

B. DHCP Scope options

C. DHCP Event Log

D. IP Address Management (IPAM)

Correct Answer: D
